LETTER OF PROMULGATION FOR NAVEDTRA 131A

1. This guidance manual has been extensively revised, in response to Navy and industry users. All changes reflect a continuing effort to increase the manual's utility to the training field. NAVEDTRA 131A supersedes and replaces NAVEDTRA 131.
2. A paradigm shift is taking place in Navy training materials development as we move from products developed within a rigid framework, and move toward design and development of training materials using a process oriented Instructional Systems Design/Systems Approach to Training (ISD/SAT). The ISD/SAT process is described in MIL-HDBK 1379-2 (9 June 1997). NAVEDTRA 131A supports the ISD/SAT process and training materials designed and developed using NAVEDTRA 131A are fully compatible with the ISD/SAT concept.
3. The procedures in this manual follow a Personnel Performance Profile (PPP) Based Curriculum Development method. This manual is intended for use by military, civil service, and contractor personnel engaged in Navy training materials development and modification.
4. Guidelines for planning a curriculum development project and for producing training materials through the five stages of the PPP based method are contained in this manual. Guidelines for the implementation and evaluation of curriculum materials are contained in NAVEDTRA 135A, Navy School Management Manual (October 1995).
5. Procedural guidance for development of training materials following a task based method is published in NAVEDTRA 130A.
6. Corrections and comments concerning this manual are invited and should be addressed to Chief of Naval Education and Training, Education Training Systems (ETS) division.
7. Reviewed and approved.

E. J. GILLEN, JR.

Example Training Project Plan

TRAINING PROJECT PLAN

SECTION 1.0 TRAINING PROJECT PLAN

Justification for Course Revision

This Training Project Plan describes a course revision to support changes to the TRIDENT Exterior Communications System (ECS) Control Monitor and Test (CMT) Subsystem Maintenance course. The following establishes the need for the course revision.

1. Major revisions to the TRIDENT Radioman PPP/TPS approved by CNTECHTRA ltr 1500 Ser N214A/1331 dtd 8 Feb 91.
2. The combination of the TRIDENT (ECS) CMT System Maintenance (A-150-0228) course and the TRIDENT (ECS) Level III Replacement (A-101-0169) course.
3. Subject course contains numerous technical documentation, and curriculum format errors.

Impact if Course is not Revised

Failure to revise the curriculum materials will result in a continuation of training which does not reflect the revised TRIDENT Radioman PPP/TPS and does not support fleet requirements.

Example Training Project Plan - Continued

TRAINING PROJECT PLAN

COURSE DATA

Course Title:

TRIDENT Exterior Communications System (ECS)
Control Monitor and Test (CMT) Subsystem

Course Identification Number (CIN):

A-111-4251

CDP: 1234

Course Status:

This is a revision to the 1976 course.

Course Mission Statement:

The TRIDENT (ECS) CMT Basic Maintenance course is designed to provide Radioman First Class the training necessary to perform documented preventive and corrective maintenance on the TRIDENT ECS Control Monitor and Test (CMT) Subsystem and undocumented corrective maintenance on selected CMT Subsystem equipments, under all conditions of readiness, in port or underway.

Occupational Classification:

NEC 4201 is awarded to course graduates.

Prerequisites:

1. Rate: RM
2. Clearance: SECRET and CRYPTO NEED-TO-KNOW
3. Graduate of TRIDENT ECS Level I (A-101-0168) course, TRIDENT (ECS) Support Subsystem (A-101-0172) course, TRIDENT (ECS) ANT/AIS Subsystem (A-101-0173) course, TRIDENT (ECS) HF/UHF Subsystem (A-101-0175) course, TRIDENT (ECS) VLF/LF Subsystem (A-101-0170) course, and TRIDENT (ECS) DSS Subsystem (A-101-0171) course.

Course Overview:

Perform selected preventive and documented corrective maintenance on the TRIDENT ECS Control Monitor and Test (CMT) Subsystem to include:

- Indicator Processor ID-2156/BSC-1

Example Training Project Plan - Continued

TRAINING PROJECT PLAN

COURSE DATA

- Antenna Deployment Indicator ID-2157/BSC-1
- Power Supply PP-7476/BSC-1
- Interface Unit J-3565/BSC-1 (Message Interface Unit)

Course Overview

- Controller Memory Unit C-10448/BSC-1
- Interface Unit J-3566/BSC-1 (Digital Interface Unit)
- Switching Unit SA-2204/BSC-1 (Mass Memory 2 Interface Unit)
- Interface Unit J-3568/BSC-1 (HSP/Magnetic Tape Unit Interface Unit)
- Recorder-Reproducer Control C-10447/BSC-1
- Recorder-Reproducer Unit RD-442/BSC-1
- Comparator CM-507/BSC-1
- Disc Memory Unit MU-674/BSC-1

This course will also provide the training necessary to perform undocumented corrective maintenance on the following CMT Subsystem equipments:

- Interface Unit J-3565/BSC-1 (Message Interface Unit)
- Interface Unit J-3566/BSC-1 (Digital Interface Unit)
- Recorder-Reproducer Control C-10447/BSC-1
- Recorder-Reproducer Unit RD-442/BSC-1
- Controller Memory Unit C-10448/BSC-1
- Disc Memory Unit MU-674/BSC-1

The course lesson topic changes are as follows:

<u>Summary of Differences</u>	<u>Hours Increased</u>
4A13 Theory of the J-3566/BSC-1	7
4A13 Corrective Maintenance of the J-3566/BSC-1	12
4A10 Theory of the J-3565/BSC-1	6
4A10 Corrective Maintenance of the J-3565/BSC-1	12
4A17 Theory of the RD-442/BSC-1	7
4A17 Corrective Maintenance of the RD-442/BSC-1	12

TRAINING PROJECT PLAN

COURSE DATA

SAFETY RISKS AND HAZARDOUS MATERIALS

This course will be designated as high risk in accordance with CNETINST 1500.20. Special emphasis must be placed on strict compliance with published safety precautions and on personnel awareness of potentially hazardous conditions while performing maintenance on energized equipment. Strict adherence to approved and verified operating, emergency, and maintenance procedures is MANDATORY. As a minimum, each individual is responsible for knowing, understanding, and observing all applicable safety precautions.

CURRICULUM DEVELOPMENT METHOD

1. Curriculum will be developed in accordance with NAVEDTRA 131. This method provides support and continuity with related training materials.
2. The documents that will be produced/revised for this course are:
 - a. Training Project Plan
 - b. Personal Performance Profiles
 - c. Training Path System
 - d. Training Course Control Document
 - e. Lesson Plan (3 Volumes)
 - f. Trainee Guide (1 Volume)
 - g. Test Package
 - h. Support Materials
3. The primary mode of instruction will be group paced consisting of lecture and seminar periods with practical/problem solving experiences. The trainees will be guided by the instructors during graded problem solving sessions to allow maximum acquisition of knowledge and skills.

TRAINING PROJECT PLAN

MILESTONE CHART

<u>Milestones</u>	<u>Completion Date</u>
1. Approval of Training Project Plan	26 April 91*
2. Develop/Revise Personnel Performance Profiles	15 May 91
3. Develop Training Path System	29 May 91
4. Submit Training Course Control Document	02 August 91
5. Approval of Training Course Control Document	09 September 91*
6. Develop Support Material	13 December 91
7. Request authorization to conduct pilot	16 December 91*
8. Conduct pilot (16 March - 08 May)	08 May 92
9. Submit pilot report and red line copy of course materials	22 June 92
10. Incorporate changes approved by CNTECHTRA	29 June 92
11. Issue Letter of Promulgation	29 July 92*
12. Print and distribute to training sites	24 August 92
13. Instructor certification/personalization complete	11 September 92
14. Implementation of training program	21 September 92

* All follow on dates assume approval will be granted by this date.

ITEM NO.	KNOWLEDGE/SKILL
1.	<u>SUBSYSTEM KNOWLEDGE</u>
1-1.	GENERAL
1-1-1.	State the functions of the Data Switching Subsystem (DSS).
1-1-2.	State that the DSS consists of the following major functional areas. Include the function of each.
	a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
	b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
	c. Signal Data Converter CV-3510B/UG
	d. TSEC/KG-84C
	(1) Remote Phase Control Unit (Part of Comparator CM-507/BSC-1)
	e. TSEC/KG-36
	f. TSEC/KWR-46
	g. TSEC/KY-75
	h. TSEC/KY-58
	i. Control Box C-12118/BSC-1
1-1-3.	Define the abbreviations, terms, and symbols used with the DSS.
1-1-4.	State the operational characteristics and capabilities of the DSS.
1-1-5.	State the security requirements for the DSS.
1-2.	PHYSICAL DESCRIPTION
1-2-1.	Describe all major and associated components of the DSS. Include names, nomenclature, physical appearance, reference designators, locations, and construction features.
	a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
	b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2200/BSC-1 Switching Units
	c. Signal Data Converter CV-3510B/UG
	d. TSEC/KG-84C

TABLE A0002. <u>BASIC ELECTRICITY (BACKGROUND)</u>	
ITEM NO.	KNOWLEDGE/SKILL
1.	KNOWLEDGE
1-1.	Define the abbreviations, terms, and symbols associated with basic electricity.
1-2.	Describe the structure of matter with respect to: <ul style="list-style-type: none"> a. States of matter b. Basic particles of matter <ul style="list-style-type: none"> 1. Molecule 2. Atom 3. Subatomic particles c. Energy level
1-3.	Describe the designators used to indicate difference between atoms. <ul style="list-style-type: none"> a. Shell and subshell b. Atomic weight and atomic number c. Valence
1-4.	Define electrical conductivity and its characteristics in different materials.
1-5.	Describe the principles of electrostatics. <ul style="list-style-type: none"> a. Law of charged bodies b. Method of charging <ul style="list-style-type: none"> 1. Friction 2. Contact 3. Induction c. Measurements of charges <ul style="list-style-type: none"> 1. Coulomb's law 2. Electroscope d. Discharging e. Law of conservation of charge f. Electrostatic lines of force g. Prime electrostatic generators
1-6.	Describe principles of magnetism. <ul style="list-style-type: none"> a. Natural and artificial magnets b. Magnetic poles c. Theories of magnetism <ul style="list-style-type: none"> 1. Weber's theory 2. Domain theory 3. Coulomb's law d. Magnetic fields e. Magnetic materials f. Magnetic shielding g. Shapes of magnets
1-7.	Describe the following: <ul style="list-style-type: none"> a. Work b. Energy <ul style="list-style-type: none"> 1. Kinetic 2. Potential

A0002-3

Example Background PPP Table

TABLE A0002.

BASIC ELECTRICITY (BACKGROUND) - Continued

ITEM NO.	KNOWLEDGE/SKILL
1-8.	Describe an electric field and its effect on: a. Electric potential b. Electric potential difference c. Potential polarity
1-9.	Describe the methods of generating electromotive force (EMF). a. Friction b. Pressure c. Heat d. Light e. Magnetism f. Chemical action
1-10.	Describe various types of cells and batteries, their construction features, specific gravity with respect to state or charge, and process utilized to generate EMF. a. Voltaic cell b. Dry cell c. Lead-acid cell d. Nickel-cadmium cell
1-11.	Describe current flow, factors which affect current flow, and unit of measurement.
1-12.	Define electrical resistance and the factors which affect resistance.
1-13.	Describe construction features of resistors. a. Carbon b. Wire-wound c. Tapped d. Sliding contact e. Potentiometers
1-14.	Describe the color code method of identifying resistor values.
1-15.	Describe the operation of simple dc series circuits with respect to the following: a. Current (I), Voltage (E), and Resistance (R) relationships 1. Ohm's law 2. Kirchoff's voltage law 3. Power determination b. Circuit safety devices
1-16.	Describe the operation of basic parallel dc circuits with respect to: a. Kirchoff's current law b. Determination of equivalent resistance 1. Reciprocal method 2. Product over the sum method c. Determination of Power

Change 1

A0002-4

Example Background PPP Table - Continued

TABLE A0002. BASIC ELECTRICITY (BACKGROUND) - Continued	
ITEM NO.	KNOWLEDGE/SKILL
1-17.	Describe the operation of basic dc series parallel combination circuits, including bridge circuits.
1-18.	Describe circuit analysis of dc networks utilizing the following techniques: a. Loop analysis using Kirchoff's voltage law b. Thevenin's theorem c. Norton's theorem
1-19.	Describe the construction and operation of a simple alternator in terms of: a. Induced voltage b. Complete cycle
1-20.	Describe the characteristics of sine waves a. Frequency b. Period c. Amplitude 1. Peak-to-peak 2. RMS 3. Instantaneous 4. Average 5. Effective d. Phase
1-21.	Describe sine wave phase relationships using vectors.
1-22.	Describe inductance (L) in terms of: a. Faraday's law b. Left-hand rule c. Lenz's law d. Self inductance e. Mutual inductance f. Unit of inductance
1-23.	Describe types of inductors. Include construction features and characteristics. a. Iron core b. Air core
1-24.	Describe determination of: a. Mutual inductance b. Total inductance of series connected inductors c. Total inductance of parallel connected inductors
1-25.	Describe current, voltage, and time relationships in series dc RL circuits. a. Growth and decay curves b. Rate of change c. Universal time constant chart
1-26.	Describe inductive reactance and phase relationships an inductive ac circuit.

Change 1

A0002-5

Example Background PPP Table - Continued

TABLE A0002. BASIC ELECTRICITY (BACKGROUND) - Continued	
ITEM NO.	KNOWLEDGE/SKILL
1-27.	Describe transformers theory with respect to: a. Primary b. Secondary c. Phase (polarity) d. Coefficient of coupling e. Turn ratios
1-28.	Describe construction features of transformers. a. Cores b. Windings
1-29.	Describe electrical characteristics of transformers in terms of: a. Effects of load 1. Mutual flux 2. Current flux 3. Power ratio b. Losses 1. Copper 2. Eddy currents 3. Hysteresis 4. Transformer efficiency 5. Transformer rating
1-30.	Describe capacitance (C) in terms of the charging and discharging of a capacitor.
1-31.	Describe the various factors which affect capacitance. a. Plate area b. Plate spacing c. Dielectric material
1-32.	Describe various types of capacitors and their construction features. a. Variable b. Fixed 1. Paper 2. Mica 3. Oil 4. Ceramic 5. Electrolytic
1-33.	Describe the color code method of identifying capacitor values.
1-34.	Describe determination of total capacitance of: a. Series connected capacitance b. Parallel connected capacitance c. Combination capacitors circuits
1-35.	Describe the current, voltage, and time relationships in series RC circuits. a. Charging b. Discharging c. Time constants

Change 1

A0002-6

Example Background PPP Table - Continued

TABLE A0002. BASIC ELECTRICITY (BACKGROUND) - Continued	
ITEM NO.	KNOWLEDGE/SKILL
1-36.	Describe capacitance reactance and phase relationships in a capacitance ac circuit.
1-37.	Describe analysis of a series RL circuit using trigonometric functions. Include effect on the circuit form: <ul style="list-style-type: none"> a. Frequency variations b. Resistance variations c. Inductance variations
1-38.	Describe analysis of a series RC circuit using trigonometric functions. Include effect on the circuit form: <ul style="list-style-type: none"> a. Frequency variations b. Resistance variations c. Capacitance variations
1-39.	Describe frequency discrimination in series RL and RC circuits, including application in low- and high-pass filters.
1-40.	Describe determination of Q and impedance in series RL and RC circuits.
1-41.	Describe the operation of series resonant circuits. Include the determination of: <ul style="list-style-type: none"> a. Resonant frequency b. Circuit Q c. Impedance d. Bandwidth
1-42.	Describe analysis of a parallel RL circuit using trigonometric functions. Include effect on the circuit from: <ul style="list-style-type: none"> a. Frequency variations b. Resistance variations c. Applied voltage variations d. High or low Q values
1-43.	Describe analysis of a parallel RC circuit using trigonometric functions. Include effect on the circuit from: <ul style="list-style-type: none"> a. Frequency variations b. Resistance variations c. Applied voltage variations
1-44.	Describe operation of parallel resonant circuits. Include the determination of: <ul style="list-style-type: none"> a. Resonant frequency b. Circuit Q c. Impedance d. Bandwidth
1-45.	Describe how RCL circuits can be utilized as simple phase shift networks.

Change 1

A0002-7

Example Background PPP Table - Continued

TABLE A0002. BASIC ELECTRICITY (BACKGROUND) - Continued	
ITEM NO.	KNOWLEDGE/SKILL
1-46.	State the purpose of motors and generators in terms of energy conversion.
1-47.	Describe the construction features of basic motors and generators.
1-48.	Describe theory of operation of basic dc and ac motors using electromagnetic principles. Include description of: <ul style="list-style-type: none"> a. Right-hand rule b. Torque c. Counter EMF d. Armature reaction e. No-load and full-load characteristics
1-49.	Describe theory of operation of basic dc and ac generators using electromagnetic principles. Include description of: <ul style="list-style-type: none"> a. Left-hand rule b. Armature reaction c. No-load and full-load devices
1-50.	Describe the operation of ac and dc motors. <ul style="list-style-type: none"> a. Motor types and applications b. Motor control circuits c. Braking and clutching devices
1-51.	Describe the operation of ac and dc generators. <ul style="list-style-type: none"> a. Generator types and applications b. Regulator and control circuits
1-52.	Describe the principles and uses of basic dc electrical measuring devices. Include the application of shunts. <ul style="list-style-type: none"> a. Galvanometer b. D'Arsonval meter c. DC ammeter d. DC voltmeter e. Ohmmeter f. Megger
1-53.	Describe the principles and uses of basic ac electrical measuring devices. Include the application of shunts. <ul style="list-style-type: none"> a. Moving iron-vane meter b. Rectifier type meter c. Electrodynamometer-type meter d. Thermocouple-type meter e. Wattmeter
1-54.	Describe the effects of open or short circuits on the following circuits. <ul style="list-style-type: none"> a. Series circuits (dc and ac) b. Parallel circuits (dc and ac)
1-55.	Describe the common types and sizes of electrical wires and cables.

Change 1

A0002-8

Example Background PPP Table - Continued

TABLE A0002. BASIC ELECTRICITY (BACKGROUND) - Continued	
ITEM NO.	KNOWLEDGE/SKILL
1-56.	Describe basic hand tools and procedures associated with maintenance of basic electrical circuits and devices such as soldering techniques and splices.
1-57.	Describe the purpose and utilization of schematic diagrams.
1-58.	Describe safety precautions which are to be observed when working with electrical circuits and Electrostatic Discharge (ESD) sensitive components, assemblies and equipment.
1-59.	Describe ESD sensitive components, assemblies, and equipment and associated problems.
1-60.	Describe the ESD control program.
1-61.	Describe the ESD protective materials and work area.
1-62.	Describe packaging, unpackaging, and inspection procedures for ESD sensitive components, assemblies, and equipments.
1-63.	Describe tools, test equipment, and maintenance procedures used for ESD protection.
1-64.	Describe ESD failure analysis techniques.
1-65.	Describe design considerations for ESD sensitive components, assemblies, and equipment.
1-66.	Describe the determination of current, voltage and impedance values in an ac circuit.
1-67.	Describe the determination of power values in an ac circuit. a. True power b. Reactive power c. Apparent power
1-68.	Describe the determination of the power factor of an ac circuit.
1-69.	Describe the analysis of series RLC circuits.
1-70.	Describe the analysis of parallel RLC circuits.
1-71.	Describe the principle of electromagnetism.
1-72.	Describe the general maintenance procedure for ac and dc motors and generators.
2.	SKILLS
2-1.	Use and interpret diagrams in conjunction with analyzing basic circuits.
2-2.	Diagnose common electrical faults.

Change 1

A0002-9

Example Background PPP Table - Continued

TABLE A0002. BASIC ELECTRICITY (BACKGROUND) - Continued	
ITEM NO.	KNOWLEDGE/SKILL
2-3.	Use basic electrical measuring devices and interpret their indications.
2-4.	Use basic handtools.
2-5.	Operate motors and generators.
2-6.	Adhere to personnel and equipment safety precautions when working with ESD sensitive components, assemblies, and equipment, electrical circuits, and basic handtools.
2-7.	Identify resistor values using resistor color codes.
2-8.	Solve basic dc series, parallel, and series parallel combination circuits, including bridge circuits. <ul style="list-style-type: none"> a. Current (I) Voltage (E) and Resistance (R) relationships <ul style="list-style-type: none"> 1. Ohm's law 2. Kirchoff's voltage law 3. Power determination 4. Determination of equivalent resistance <ul style="list-style-type: none"> (a) Reciprocal method (b) Product over the sum method
2-9.	Determine equivalent dc networks utilizing the following techniques. <ul style="list-style-type: none"> a. Loop analysis using Kirchoff's voltage law b. Thevenin's theorem c. Norton's theorem
2-10.	Determine sine wave phase relationships using vectors.
2-11.	Determine the total inductance of series, parallel, and series parallel connected inductors.
2-12.	Solve current, voltage, and time relationships in dc RL circuits.
2-13.	Solve inductive reactance and phase relationships in an inductive ac circuit.
2-14.	Determine the current, voltage, and power relationship of a transformer with respect to: <ul style="list-style-type: none"> a. Primary b. Secondary c. Phase (Polarity) d. Coefficient of coupling e. Turns ratio
2-15.	Determine the current, voltage, and time relationships in series RC circuits. <ul style="list-style-type: none"> a. Charging b. Discharging c. Time constants

TRIDENT EXTERIOR COMMUNICATIONS SYSTEM (ECS)
TRAINING PATH SYSTEM
REPORT

August 1990

UNCLASSIFIED

Example TPS Report Cover Page

PERFORM TOS SET

T0 B/G (BACKGROUND) AND T/F (TASK/FUNCTION

SKILL/KNOWLEDGE TOS

T0 – Includes: The background skill and knowledge which is *prerequisite* to the understanding of the operation and maintenance of the system, subsystem or equipment **AND** The task/function skill and knowledge *which is not unique* to the operation or maintenance of a particular system/subsystem/equipment:

S – B/G Skill:

Completion of training provides the PREREQUISITE (Background), PHYSICAL or MENTAL Skills necessary to support follow-on training in *DIRECTING* the operation or maintenance of a system/subsystem/equipment, or further background training

B1 – B/G Knowledge:

Completion of training provides the level of knowledge necessary to recognize or recall ideas, phenomena, symbology and terminology which are *PREREQUISITE* to comprehension of a task or function

B2 – B/G Comprehension:

Completion of training provides the comprehension of principles, rules and concepts necessary to solve given problems and situations and performance

J – T/F SKILL:

Completion of training provides the *PHYSICAL AND/OR MENTAL* Skills required to *DIRECT* the job or task/function

Q – T/F KNOWLEDGE:

Completion of training provides the knowledge required to *DIRECT* the job or task/function

Example Perform TOS Set Statements

PERFORM TOS SET

FAMILIARIZATION TOS

F1 - Knowledge:

Completion of training provides FAMILIARITY with the:

- Purpose, operational concepts, location, capabilities and limitations of a system/subsystem/equipment
- Organization, content, and use of the technical documentation provided for use with the system/subsystem/equipment

Example Perform TOS Set Statements - Continued

PERFORM TOS SET

OPERATION/MAINTENANCE SKILL TOS

O1-Skill

Completion of training provides the skill to perform normal operations.

O2-Skill

Completion of training provides the skill to perform:

- Normal operations requiring advanced analysis
- Abnormal operations (defined as casualty/degraded/not full mission capable)

P1-Skill

Completion of training provides the skill to perform preventive maintenance.

C1-Skill

Completion of training provides the skill to perform to the authorized maintenance level, systematic fault isolation procedures.

C2-Skill

Completion of training provides the skill to perform to the authorized maintenance level:

- Systematic fault isolation procedures that require advanced analysis
- Authorized techniques to isolate faults that cannot be isolated using procedures contained in prescribed documentation

C3-Skill

Completion of training provides the skill and knowledge to perform, without supervision, diagnosis of equipment malfunctions, fault isolation, and all repairs (this skill is acquired through on-the-job experience, and reflects a continuous learning process that is supported by the skills and knowledge taught in the formal school environment).

PERFORM TOS SET

OPERATION/MAINTENANCE KNOWLEDGE TOS

T1-Knowledge

Completion of training provides the knowledge to perform normal operations:

- Organization, content, and use of the technical documentation provided for use with the system/subsystem/equipment

T2-Knowledge

Completion of training provides the knowledge to perform:

- Normal operations requiring advanced analysis
- Abnormal operations (defined as casualty/degraded/not full mission capable)
- Preventive maintenance
- Basic corrective maintenance
- Organization, content, and use of the technical documentation provided for use with the system/subsystem/equipment

T3-Knowledge

Completion of training provides the knowledge to perform advanced corrective maintenance:

- Organization, content, and use of the technical documentation provided for use with the system/subsystem/equipment

TRAINING COURSE CONTROL DOCUMENT

Foreword

The TRIDENT Exterior Communication System (ECS) Basic Maintenance course is designed to provide the training necessary to perform selected preventive and documented corrective maintenance on the TRIDENT ECS Control Monitor and Test (CMT) Subsystem. In addition, training is provided in carrying out undocumented corrective maintenance on selected CMT Subsystem equipments.

TRAINING COURSE CONTROL DOCUMENT

COURSE DATA

Course Title:

TRIDENT Exterior Communications System (ECS)
Control Monitor and Test (CMT) Subsystem

Course Identification Number (CIN):

A-111-4251

CDP: 1234

Course Status:

This is a revision to the course developed Oct. 1976.

Course Mission Statement:

The TRIDENT (ECS) CMT Basic Maintenance course is designed to provide Radioman First Class the training necessary to perform documented preventive and corrective maintenance on the TRIDENT ECS Control Monitor and Test (CMT) Subsystem and undocumented corrective maintenance on selected CMT Subsystem equipments, under all conditions of readiness, in port or underway.

Occupational Classification:

NEC 4201 is awarded to course graduates.

Prerequisites

1. Rate: RM
2. Clearance: SECRET and CRYPTO NEED-TO-KNOW
3. Graduate of TRIDENT ECS Level I (A-101-0168) course, TRIDENT (ECS) Support Subsystem (A-101-0172) course, TRIDENT (ECS) ANT/AIS Subsystem (A-101-0173) course, TRIDENT (ECS) HF/UHF Subsystem (A-101-0175) course, TRIDENT (ECS) VLF/LF Subsystem (A-101-0170) course, and TRIDENT (ECS) DSS Subsystem (A-101-0171) course.

Course Overview:

Perform selected preventive, and documented, and undocumented, corrective maintenance on the TRIDENT ECS Control Monitor and Test (CMT) Subsystem to include:

- Indicator Processor ID-2156/BSC-1

TRAINING COURSE CONTROL DOCUMENT

COURSE DATA (Continued)

- Antenna Deployment Indicator ID-2157/BSC-1
- Power Supply PP-7476/BSC-1
- Interface Unit J-3565/BSC-1 (Message Interface Unit)
- Controller Memory Unit C-10448/BSC-1
- Interface Unit J-3566/BSC-1 (Digital Interface Unit)
- Switching Unit SA-2204/BSC-1 (Mass Memory 2 Interface Unit)
- Interface Unit J-3568/BSC-1 (HSP/Magnetic Tape Unit Interface Unit)
- Recorder-Reproducer Control C-10447/BSC-1
- Recorder-Reproducer Unit RD-442/BSC-1
- Comparator CM-507/BSC-1
- Disc Memory Unit MU-674/BSC-1

Course Length:

1. 61 Calendar Days
2. 45 Instructional Days

Current Course Length:

1. 52 Calendar Days
2. 38 Instructional Days

Training Sites:

1. TRIDENT Training Facility, Bangor, Silverdale Washington
2. TRIDENT Training Facility, Kings Bay, Georgia

Site Unique Training Considerations:

1. None

Number of Classes by Training Site:

1. TRIDENT Training Facility, Bangor
2. TRIDENT Training Facility, Kings Bay

Planned:

3
3

Class Capacity by Training Site:

1. TRIDENT Training Facility, Bangor
 - a. Maximum:
 - b. Minimum:

Planned:

12
8

TRAINING COURSE CONTROL DOCUMENT

COURSE DATA (Continued)

Class Capacity by Training Site:- Continued Planned:

- 2. TRIDENT Training Facility, Kings Bay
 - a. Maximum: 12
 - b. Minimum: 8

Planned Average Onboard by Training Site: Planned:

- 1. TRIDENT Training Facility, Bangor 12
- 2. TRIDENT Training Facility, Kings Bay 12

Instructor/Support Manning by Site:

The estimated plan for instructor/support manning is based on the same ratios for all sites. Periods can be found on the Course Master Schedule.

- 1. TRIDENT Training Facility, Bangor Planned: 4
- 2. TRIDENT Training Facility, Kings Bay 4

TRAINING COURSE CONTROL DOCUMENT

TRAINEE DATA

Personnel Physical Requirements:

NONE

Security Clearance:

Clearance: SECRET and CRYPTO NEED-TO-KNOW

Obligated Service:

In accordance with the Enlisted Transfer Manual

NOBC/NEC Earned:

NEC 4201

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION

A-111-4251

COURSE LEARNING OBJECTIVES

Upon successful completion of this course, the trainees will have acquired the following knowledge and skills and be able to:

Knowledge:

1. Describe the theory necessary to support and understand the performance of normal and degraded operational tasks and all preventive maintenance without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the following:

- a. TRIDENT Exterior Communications System (ECS)
- b. Data Switching Subsystem (DSS)
- c. Power Distribution Group
- d. Towed Buoy Antenna AN/BRR-6

2. Describe the theory necessary to support and understand the performance of documented fault isolation and repair without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the following:

Skills:

1. Perform normal and degraded operational procedures with

supervision on the following:

- a. TRIDENT Exterior Communications System (ECS)
- b. Data Switching Subsystem (DSS)
- c. Power Distribution Group
- d. Towed Buoy Antenna AN/BRR-6

NOTE TO THE READER. CLOs T1 and T2 have been combined into a single CLO, i.e., "normal and degraded"

2. Perform preventive maintenance procedures with supervision on the following:

- a. TRIDENT Exterior Communications System (ECS)
- b. Data Switching Subsystem (DSS)
- c. Power Distribution Group
- d. Towed Buoy Antenna AN/BRR-6

A-4-15

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION

A-111-4251

COURSE LEARNING OBJECTIVES - Continued.

Knowledge:

- a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
 - b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
3. Describe the theory necessary to support undocumented fault isolation and repair requiring advanced analysis without going into signal or electrical flow, computer instructions, or detailed mechanical component breakdown except for those mechanical or logic elements or circuits unique to the equipment or program of the Interface Unit J-3565/BSC-1 (Message Interface Unit).

Skills:

3. Perform, with supervision, documented fault isolation and repair procedures to the authorized maintenance level on the following:
- a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
 - b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
4. Perform fault isolation and repair of faults that cannot be located using procedures contained in prescribed documentation or that require advanced analysis, with supervision, on the Interface Unit J-3565/BSC-1 (Message Interface Unit).

PART F0147

EXTERIOR COMMUNICATIONS SYSTEM (ECS) ELECTRIC SYSTEM

This part contains information from PPP Tables F0147, F0202 and A0002.

- Section 1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP (T1, T2)
- Section 2. BASIC OPERATION AND OPERATION OF THE DATA SWITCHING SUBSYSTEM (DSS) (O1, O2)
- Section 3. PREVENTIVE MAINTENANCE OF THE TRIDENT EXTERIOR COMMUNICATIONS SYSTEM (ECS) (P1)
- Section 4. THEORY OF THE DATA SWITCHING SUBSYSTEM (DSS) (T1, T2)
- Section 5. BASIC CORRECTIVE MAINTENANCE OF THE SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 SWITCHING UNITS AND PP-7474/BSC-1, PP-7475/BSC-1 POWER SUPPLIES (C1)
- Section 6. THEORY OF AND ADVANCED THEORY OF THE INTERFACE UNIT J-3565/BSC-1 (MESSAGE INTERFACE UNIT) (KINGS BAY) (T2, T3)
- Section 7. PREVENTIVE, BASIC CORRECTIVE, AND CORRECTIVE MAINTENANCE OF THE OF THE INTERFACE UNIT J-3565/BSC-1 (MESSAGE INTERFACE UNIT) (P1, C1, C2)
- Section 8. THEORY OF THE TSEC/KY-58 (T1)
- Section 9. PREVENTIVE AND BASIC CORRECTIVE MAINTENANCE OF THE TSEC/KY-58 (P1, C1)

Only certain pages of the Curriculum Outline of Instruction were used as examples, the other pages were intentionally omitted.

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION

A-111-4251

Section 1: INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

<u>Topic No.</u>	<u>Topic Title</u>	<u>Page</u>
1	General and Documentation Description of the Power Distribution Group	F0147-1-1-1
2	General, Physical, Functional, and Interface Description of the AN/BRR-6	F0147-1-2-1
3	Operational Description of the DSS	F0147-1-3-1
4	Maintenance Description of the ECS	F0147-1-4-1

NOTE TO THE READER. The titles are inconsistent between the section and topics because a variety of topics were selected to present a broader sampling. Also, Topic No. 2 shows four topic titles combined into one topic, while the convention recommends not more than three be combined.

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251

Topic 1: GENERAL AND DOCUMENTATION DESCRIPTION OF THE POWER DISTRIBUTION GROUP

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. State the functions of the Power Distribution Group. (01)
2. State that the Power Distribution Group consists of the following major functional areas. Include the function of each to support normal operations. (02, P1, T1)
 - a. Power panel
 - b. Power distribution black panel
 - c. Power distribution red panel
 - d. Component compartment
 - e. Ground fault indicator panel
 - f. Junction Boxes
3. Define the abbreviations, terms, and symbols used with the Power Distribution Group to support all operations and preventive maintenance. (02, P1)
4. State the operational characteristics and capabilities of the Power Distribution Group to support all operations and preventive maintenance. (02, P1, T2)
5. State the security requirements for the Power Distribution Group to support all operations and preventive maintenance. (02, P1)
6. Describe the organization, content, and use of all technical documentation provided for use with the Power Distribution Group to support normal operations. (01, T1)

Topic Learning Objectives (TLOs) should be in instructional sequence. This is usually the same as the PPP table line item sequence.

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION (Continued)

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251

Topic 2: GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

k. Relay Assembly RE-1115/BRR-6

Topic Learning Objectives

l. Interconnecting Box J-3461/BRR-6

Upon successful completion of this topic, the trainee will be able to:

m. Towed Array Control Indicator Panel

1. State the functions of the AN/BRR-6. (T1)

Subitems should appear exactly as they do on the PPP table.

2. State the major functions of AN/BRR-6 consisting of: Include the function of each to support normal operations. (T1)

3.

Define the abbreviations and terms used with the AN/BRR-6 to support all operations and preventive maintenance. (O2,P1,T2)

a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)

4.

State the operational characteristics and capabilities of the AN/BRR-6 to support all operations and preventive maintenance. (O2,P1,T2)

b. Receiver Group OR-197/BRR-6

c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6

5.

State the security requirements for the AN/BRR-6 to support all operations and preventive maintenance. (O2,P1,T2)

d. Buoy Cradle MT-4905/BRR-6

e. Reeling Machine RL-275/BRR-6

f. Sensor Group OA-8906/BRR-6

g. Buoy Door Sensing Switch

h. Buoy Control Indicator C-10256A/BRR-6

i. Antenna Control Indicator C-10257/BRR-6

j. Buoy Depth Control Indicator C-10258A/BRR-6

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION (Continued)

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251

6. Describe all major and associated components of the AN/BRR-6 to support all operations and preventive maintenance. Include names, nomenclature, physical appearance, reference designators, locations, and construction features. (O2,P1,T2)
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6
 - g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6
 - i. Antenna Control Indicator C-10257/BRR-6
 - j. Buoy Depth Control Indicator C-10258A/BRR-6
 - k. Relay Assembly RE-1115/BRR-6
 - l. Interconnecting Box J-3461/BRR-6
 - m. Towed Array Control Indicator Panel

7. Describe the controls and indicators directly associated with the AN/BRR-6 to support all operations and preventive maintenance. Include names, reference-designators positions, conditions, colors, locations, and functions. (O2,P1,T2)

TLOs should contain only those "include" statements that are applicable to the subject matter and TOS level being covered (e.g., construction features may not be applicable to every physical description topic).

8. Describe how the AN/BRR-6 works (functional operation) to support all operations and preventive maintenance. Include signal flow, sequential operation, and indications. (O2,P1,T2)
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)

The TB-18A/BRR-6 and EE126-FA-MMF-010/E110-BRR-6 are fictitious and used for illustration purposes only.

Topic 3: OPERATIONAL DESCRIPTION OF THE DSS

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. Describe the authority and regulations pertaining to normal operation of the following equipment, including external equipments which interface with them. (O1,T1)

- a. TSEC/KG-84C
- b. TSEC/KG-36
- c. TSEC/KWR-46
- d. TSEC/KY-75
- e. TSEC/KY-58

2. Describe the authority and regulations pertaining to all operations of the DSS and the following equipment, including external equipments which interface with them. (O2,T2)

- a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
- b. Signal Data Converter CV-3510B/UG3.

3. Describe the routine preoperational, operational, and post operational tasks for

normal operation of the DSS and the following equipment. (O1,T1)

- a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units

- b. Signal Data Converter CV-3510B/UG
- c. TSEC/KG-84C
- d. TSEC/KG-36
- e. TSEC/KWR-46
- f. TSEC/KY-75
- g. TSEC/KY-58

4. Describe indications which may occur during normal operation of the DSS and the following equipment. Include alarms, indicators, and displays. (O1,T1)

- a. TSEC/KG-84C
- b. TSEC/KG-36

Topic 4: MAINTENANCE DESCRIPTION OF THE ECS

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. Define the maintenance policy for the ECS and the following subsystems and equipment required to support preventive maintenance as the requirement for periodic performance of tasks to minimize equipment malfunctions. Including: Servicing scheduled or unscheduled inspections, cleaning, lubrication, corrosion control and any other function in support of maintaining and equipment full mission capable; and Operational checks (confidence or Performance checks, and Degradation/deterioration checks). (P1,T2)

- a. Control, Monitor, and Test (CMT) Subsystem
 - (1) Interface Unit J-3565/BSC-1 (Message Interface Unit)
 - (2) Interface Unit J-3566/BSC-1 (Digital Interface Unit Interface)
 - (3) Interface Unit J-3568/BSC-1 (HSP/Magnetic Tape Unit Interface Unit)
 - (4) Recorder-Reproducer Control C-10447/BSC-1
 - (5) Recorder-Reproducer Unit RD-442/BSC-1
 - (6) Comparator CM-507/BSC-1

- b. Data Switching Subsystem (DSS)
 - (1) SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - (2) Signal Data Converter CV-3510B/UG
- c. Very Low Frequency/Low Frequency (VLF/LF) Subsystem
 - (1) Radio Receiver R-2109/BSC-1
 - (2) Radio Receiver R-2320/URR
 - (3) Digital Data Processor CP-1071B/WR
 - (4) Digital Data Demodulator MD-1191/WRR-7B
 - (5) Electrical Equipment Enclosure CY-8410/WRR-7B
 - (6) Power Supply PP-8098/BSC-1
- d. High Frequency/Ultra High Frequency (HF/UHF) Subsystem
 - (1) Radio Receiver-Transmitter RT-1107(V)12/WSC-3(V)
 - (2) Voice Switch Unit Control C-10975
 - (3) Command Center Telephone Terminal
- e. Support Subsystem
 - (1) Teleprinter TT-624/UG

f. Antenna Suite

- (1) Multifunction Mast Antenna Group
OE-207/BR
- (2) Towed Buoy Antenna AN/BRR-62.

- 2. Describe preventive maintenance procedures for the ECS and the subsystems and equipment listed in learning objective 1. Include recognition and interpretation of indications, records, reports, and instructions. (P1,T1)
- 3. Describe personnel and equipment safety precautions, including tag-out procedures, which are to be observed while performing preventive maintenance on the ECS and the subsystems and equipment listed in learning objective 1. (P1,T2)

Where ten or more sub-items exist for a series of TLOs, it is permissible to have the listing appear in the first TLO only. Then, refer back to that learning objective in the remaining TLOs.

TRAINING COURSE CONTROL DOCUMENT
CURRICULUM OUTLINE OF INSTRUCTION (Continued)

2. BASIC OPERATION AND OPERATION OF THE DATA SWITCHING SUBSYSTEM (DSS)

A-111-4251

Topic 1: Basic Operation and Operation of the DSS

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. Perform routine preoperational, operational, and post-operational tasks for normal operation of the DSS and the following equipment. (O1,T1)
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
 - c. TSEC/KG-84C
 - d. TSEC/KG-36
 - e. TSEC/KWR-46
 - f. TSEC/KY-75
 - g. TSEC/KY-58
2. Recognize and interpret all indications occurring during the performance of normal operating procedures, and perform appropriate operator actions in proper sequence on the DSS and the following equipment. (O1,T1)
 - a. TSEC/KG-84C
 - b. TSEC/KG-36
 - c. TSEC/KG-46
 - d. TSEC/KY-75
 - e. TSEC/KY-58
3. Recognize and interpret all indications occurring during the performance of all operating procedures, and perform appropriate operator actions in proper sequence on the DSS and the following equipment. (O2,T2)
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
4. Perform operational tasks in the casualty/degraded/abnormal modes of operation of the DSS and the following equipment. (O2,T2)
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
5. Adhere to personnel and equipment safety precautions during normal operational procedures of the DSS and the following equipment. (O1,T1)
 - a. TSEC/KG-84C
 - b. TSEC/KG-36

2. Wall Charts. The wall charts for this course are full-sized photocopies of Communications Central AN/BSC-1 equipment racks. The wall chart numbers were determined based on the first time the wall chart was used in the TRIDENT Radioman pipeline. For example, the number A-101-0168-4-5 indicates that the Rack A5 wall chart was first used in the TRIDENT ECS Level I course, it relates to PPP Table 4, and it is the fifth wall chart associated with that PPP table.

LESSON PLAN

A-111-4251 REV A

SECURITY AWARENESS NOTICE

In the event that classified information is added to this Lesson Plan as a result of instructor personalization, the Lesson Plan shall be marked and handled in accordance with the regulations of the latest edition of the Department of the Navy Supplement to the DoD Information Security Program Regulation OPNAVINST 5510.1 series.

A-5-13

LESSON PLAN

A-111-4251 REV A

SAFETY/HAZARD AWARENESS NOTICE

All personnel involved in operation or maintenance of electronic equipment must be thoroughly familiar with the electronic equipment safety precautions contained in Electronic Installation and Maintenance Book (SE000-00-EIM-100), section 3, and NSTM, Electronics, chapter 400, (S9086-ND-STM-000/ch. 400), section 2. In addition, attention is directed to the Navy Occupational Safety and Health Program, OPNAVINST 5100.19 series, Navy Occupational Safety and Health for Forces Ashore, OPNAVINST 5100.23 series, and Safety Policy and Procedures for Conducting Training, CNETINST 1500.20 series.

This equipment employs voltages which are dangerous and may be fatal if contacted by operating or maintenance personnel. Extreme caution must be exercised when working with this equipment. Hazard awareness dictates that this equipment must always be viewed as an integral part of a system and not as a component. While every practical precaution has been incorporated into this equipment, it is not possible or practical to try to list every condition or hazard that you may encounter. Therefore, all operating or maintenance personnel must at all times observe as a minimum, the following:

Don't service or adjust alone. Under no circumstances will a person operate or maintain equipment without the immediate presence or assistance of another person capable of rendering aid. Unless under direct supervision of a qualified person, no person shall operate or maintain equipment for which he is not qualified.

Don't tamper with interlocks. Reliance on interlock circuits to remove power from the equipment is never to be assumed. Until operation of the interlock is verified, equipment is assumed to be in the hazardous mode of operation. Under no circumstances will any access gate, door, or interlock switch be removed, bypassed or modified in any way by other than authorized maintenance personnel and then only after observing proper tag-out procedures.

Training Time Out. Any time a trainee or instructor has apprehension concerning his personal safety, or that of another, he shall verbally signal "TRAINING TIME OUT" to stop the exercise and receive or provide additional instruction as appropriate in accordance with CNETINST 1500.20 series.

LESSON PLAN

A-111-4251 REV A

SAFETY/HAZARD AWARENESS NOTICE - Continued.

Report all hazards. If at any time you detect a hazard, it is your responsibility to report the hazard to ensure that it is corrected. If at any time you detect a "new" or "suspected new" hazard, particularly due to equipment installation, modification or repair, it is your responsibility to ensure that a SAFETYGRAM is submitted to the Naval Safety Center, Norfolk, VA, in accordance with OPNAVINST 5100.19 series. This will ensure that this hazard will be investigated, publicized, or corrected, as required.

The Pre-Mishap plan explains the procedures to follow and essential telephone numbers to call in case of an accident or emergency. It is located by the emergency exit in the laboratory.

A-5-15

HOW TO USE THE LESSON PLAN

COMPOSITION OF THE LESSON PLAN

This Lesson Plan provides an instructor with the information required to prepare for, and instruct, the topics assigned. As an introduction to each topic, the instructor shall display his/her name and the topic title on the chalkboard. The instructor will also inform the trainees of the Topic Learning Objectives, establish classroom procedures (questioning, note taking, breaks, etc.), and motivate the trainees by emphasizing the importance of the topic. At the end of each day of instruction, the instructor will assign the trainee any materials required in preparation for the following day. Each topic within this Lesson Plan contains the following:

1. Topic Learning Objectives. These objectives are written to reflect the training level(s) of Personnel Performance Profiles (PPPs) that the topic supports. The objectives are derived by applying elements of the Training Objective Statements (TOS) to the elements for the PPPs.
2. Trainee Preparation. This portion assigns the study and review material that the trainee must complete to prepare for this topic. It contains detailed assignments in reference publications, diagrams, and support materials, and is assigned at the end of each day of instruction. The instructor must review the Trainee Preparation portion of the topics planned for the following day and make study assignments accordingly.
3. Instructor Preparation. This part of the topic page contains:
 - a. A reminder to review assigned trainee material.
 - b. A list of all reference materials required by the instructor to prepare for instructing a topic.
 - c. A list of all trainee materials required for the topic, including reference, equipment, support materials, and test equipment.

HOW TO USE THE LESSON PLAN - Continued

4. Discussion-Demonstration-Activities. This page is divided into two columns, as follows:
- a. Discussion Point. This column outlines the subject matter to the depth necessary to support the training level(s) of the corresponding topic learning objective. Also, sufficient space is provided for instructor personalization.
 - b. Related Instructor Activity. This column lists specific instructor activities, excluding oral discussion, which will aid in trainee learning. This Related Instructor Activity Column provides the instructor specific instructions relative to reference documents, instructional media material, and guidance regarding trainee behavior during presentation of instruction. These activities carry the same number as the discussion points to which they are related. As with the discussion points, space is left for the instructor to add personalizing notes. The phrase "Reference ..." is used to help the instructor locate information applicable to a particular discussion point and to be used to prepare for the material to be covered. It is not intended to direct the instructor to use that reference material in the classroom. The term "Refer to ..." provides direction for the instructor when the reference material is actually intended for use in the classroom. If there is no related instructor activity for a discussion point, the space is left blank and the number omitted.

FUNCTION OF THE LESSON PLAN

The Lesson Plan expands the approved Curriculum Outline of Instruction into a content format that will serve as an effective plan for instruction. It provides room for instructors to add individual notes. The form of the lesson plan facilitates preparation, minimizes deviation from the approved plan for the topic, and lessens the need for rewriting material already contained in the outline. As the instructors prepare to teach the topic for the first time, they may write in the technical data, information, or notes to be used to do a professional job of

HOW TO USE THE LESSON PLAN - Continued

instruction. As instructors gain experience teaching a topic, they may modify and improve the data written in.

All theory discussions must relate to practical work. The design theory of an equipment may be interesting to the instructor, but the trainee must learn how to keep the equipment in proper operating condition. The trainee must bypass all unnecessary knowledge and concentrate on learning to perform the necessary maintenance techniques required by these equipments. Any activity that does not contribute directly to training in the operation and maintenance of these equipments is wasted effort, regardless of how interesting it may seem to be. A thorough understanding of the equipment theory is necessary in order that the practical work on the equipment may be accomplished. The reason for the theory is to assist the trainee in doing practical work.

A Lesson Plan without the instructor's personalization is maintained in the appropriate school offices and has several administrative functions. The Officer-in-Charge and the course supervisors will use it as a guide in determining the kind and depth of the material taught, and as a reference in monitoring the effectiveness of instruction. Each instructor will use it as a reference to determine what the trainees have learned prior to, and will learn subsequent to the topic, so that the instructor can gauge the level and direction of instruction. When approved by the Chief of Naval Education and Training, this Lesson Plan becomes the master plan for instruction.

USE OF THE LESSON PLAN

When issued to an instructor, this plan becomes his/her personal property, subject only to the regulations that govern classified matter. Each instructor will make handwritten entries in the spaces provided. Personalized topics may be passed on to a relieving instructor. However, they are to be used only for reference purposes in developing a personalized Lesson Plan.

HOW TO USE THE LESSON PLAN - Continued

Changes to this plan are made by direction of the Chief of Naval Education and Training through recommendations by the school and from the results of the training evaluation program. All changes shall ensure effective trainee comprehension and fulfillment of topic learning objectives.

STUDY ASSIGNMENTS

Study assignments are provided in the Lesson Plan. One of the objectives of the training is learning to intelligently use the technical manuals associated with the equipments. Training effectiveness depends on conscientious and consistent use of the assignments and schematics in the pertinent technical manuals. All completed assignments should be reviewed with the trainee at the first opportunity.

EQUIPMENT FAULTS

The Fault Applicability List in the Lesson Plan lists the faults/fault insertion devices required in this course. When desirable, additional faults may be selected from the Fault Applicability List.

INSTRUCTION SHEETS, EXAMINATIONS, QUIZZES

Instruction Sheets, consisting of Information Sheets, Job Sheets, Assignment Sheets, Problem Sheets, and Diagram Sheets are an integral part of the course and aid trainees in achieving the topic learning objectives. It is necessary to see that these activities are accurately completed.

Answers to questions on the sheets are provided on the Answer Sheet at the back of each Lesson Plan. Trainees should be instructed to write only on Trainee Name Page, Job Sheets, Diagram Sheets, and Problem Sheets. At the end of the course, the instructor will collect Trainee Guides or Instruction Sheets. New Trainee Name Pages, Job Sheets, Diagram Sheets, and Problem Sheets will be reproduced and inserted so the Trainee Guides and Instruction Sheets may be used in the next course.

HOW TO USE THE LESSON PLAN - Continued

Quizzes and examinations are administered to monitor trainee comprehension at the completion of significant areas of instruction.

DIVISION OF COURSE MATERIALS INTO FUNCTIONAL PARTS

The course material in the Lesson Plan has been divided into parts to support PPP tables as assigned by the corresponding Table Assignment Charts. It has been further divided into sections to support instruction on theory, operation, preventive maintenance, and corrective maintenance. The sequence of instruction is based on an analysis of the tasks for trainee performance and on the requirements for prerequisite knowledge or skills required for instruction on the more complex equipments.

TRAINING MATERIAL SUPPORT PROGRAM

The Training Material Support Program has been established for the purpose of improving the curriculum and other training materials. It is each instructor's responsibility to become familiar with this program as outlined in the applicable management documentation. You are to submit all your suggestions for improvement through a Change Recommendation as outlined in the applicable management documentation. These suggestions should include discrepancies found or any comments that you feel will improve training. There will be no changes in this curriculum until authorized by the Deputy For Shore/Technical Training (CNET T2).

SAFETY PRECAUTIONS

Voltages present in the equipment are extremely dangerous. The delicacy of some equipment and the stringent ventilation requirements for solid-state electronic circuits must be continuously stressed. Safety must be part of each day of training so that the trainee will develop safe working habits. Practice and Teach Safety!

LESSON PLAN

LESSON PLAN

A-111-4251 REV A

COURSE LEARNING OBJECTIVES

Upon successful completion of this course, the trainees will have acquired the following knowledge and skills and be able to:

Knowledge:

1. Describe the theory necessary to support and understand the performance of normal and degraded operational tasks and all preventive maintenance without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the following:
 - a. TRIDENT Exterior Communications System (ECS)
 - b. Data Switching Subsystem (DSS)
 - c. Power Distribution Group
 - d. Towed Buoy Antenna AN/BRR-6

2. Describe the theory necessary to support and understand the performance of documented fault isolation and repair without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the following:

Skills:

1. Perform normal and degraded operational procedures with supervision on the following:
 - a. TRIDENT Exterior Communications System (ECS)
 - b. Data Switching Subsystem (DSS)
 - c. Power Distribution Group
 - d. Towed Buoy Antenna AN/BRR-6

2. Perform preventive maintenance procedures with supervision on the following:
 - a. TRIDENT Exterior Communications System (ECS)
 - b. Data Switching Subsystem (DSS)
 - c. Power Distribution Group
 - d. Towed Buoy Antenna AN/BRR-6

A-5-25

LESSON PLAN

A-111-4251 REV A

COURSE LEARNING OBJECTIVES - Continued.

Knowledge:

- a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
 - b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
3. Describe the theory necessary to support undocumented fault isolation and repair requiring advanced analysis without going into signal or electrical flow, computer instructions, or detailed mechanical component breakdown except for those mechanical or logic elements or circuits unique to the equipment or program of the Interface Unit J-3565/BSC-1 (Message Interface Unit).

Skills:

3. Perform, with supervision, documented fault isolation and repair procedures to the authorized maintenance level on the following:
- a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
 - b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
4. Perform fault isolation and repair of faults that cannot be located using procedures contained in prescribed documentation or that require advanced analysis, with supervision, on the Interface Unit J-3565/BSC-1 (Message Interface Unit).

Part F0147

EXTERIOR COMMUNICATIONS SYSTEM (ECS) ECLECTIC SYSTEM

This part contains information from PPP Tables F0147, F0194, F0156, and F0202.

- Section 1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP (T1, T2)
- Section 2. BASIC OPERATION AND OPERATION OF THE DATA SWITCHING SUBSYSTEM (DSS) (O1, O2)
- Section 3. PREVENTIVE MAINTENANCE OF THE TRIDENT EXTERIOR COMMUNICATIONS SYSTEM (ECS) (P1)
- Section 4. THEORY OF THE DATA SWITCHING SUBSYSTEM (DSS) (T1, T2)
- Section 5. BASIC CORRECTIVE MAINTENANCE OF THE SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 SWITCHING UNITS AND PP-7474/BSC-1, PP-7475/BSC-1 POWER SUPPLIES (C1)
- Section 6. THEORY OF AND ADVANCED THEORY OF THE INTERFACE UNIT J-3565/BSC-1 (MESSAGE INTERFACE UNIT) (KINGS BAY) (T2, T3)
- Section 7. PREVENTIVE, BASIC CORRECTIVE, AND CORRECTIVE MAINTENANCE OF THE INTERFACE UNIT J-3565/BSC-1 (MESSAGE INTERFACE UNIT) (P1, C1, C2)
- Section 8. THEORY OF THE TSEC/KY-58 (T1)
- Section 9. PREVENTIVE AND BASIC CORRECTIVE MAINTENANCE OF THE TSEC/KY-58 (P1,C1)

Section 1: INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

<u>Topic No.</u>	<u>Topic Title</u>	<u>Page</u>
1	General and Documentation Description of the Power Distribution Group	F0147-1-1-1
2	General, Physical, Functional, and Interface Description of the AN/BRR-6	F0147-1-2-1
3	Operational Description of the DSS	F0147-1-3-1
4	Maintenance Description of the ECS	F0147-1-4-1

The titles are inconsistent between the section title and topics because a variety of topics were selected to present a broader sampling.

A-5-28

F0147-1-1

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

LAB PERIODS:0.0

Topic 1: GENERAL AND DOCUMENTATION DESCRIPTION OF THE POWER DISTRIBUTION GROUP

CLASS PERIODS:1.0

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. State the functions of the Power Distribution Group.
2. State that the Power Distribution Group consists of the following major functional areas. Include the function of each to support normal operations.
 - a. Power panel
 - b. Power distribution black panel
 - c. Power distribution red panel
 - d. Component compartment
 - e. Ground fault indicator panel

3. Define the abbreviations, terms, and symbols used with the Power Distribution Group to support all operations and preventive maintenance.

"All operations" is used as the condition modifier to indicate that the TLO is intended to support normal operations, casualty/degraded/abnormal/not full mission capable modes of operation, and/or operation requiring advanced analysis as applicable to the subsystem or equipment identified therein.

TLOs should be tailored to suit the subject matter of the topic (e.g., if there are no symbols used with the Power Distribution Group for operation and preventive maintenance, then symbols should not appear in the TLO or the related DP in the DDA pages).

4. State the operational characteristics and capabilities of the Power Distribution Group to support all operations and preventive maintenance.
5. State the security requirements for the Power Distribution Group to support all operations and preventive maintenance.

Topic Learning Objectives (TLOs) should be in instructional sequence. This is usually the same as the PPP table line item sequence.

A-5-29

F0147-1-1-1

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 1: GENERAL AND DOCUMENTATION DESCRIPTION OF THE POWER DISTRIBUTION GROUP - Continued.

6. Describe the organization, content, and use of all technical documentation provided for use with the Power Distribution Group to support normal operations.

1. Trainee Guide
2. Publications:
 - a. EE109-AJ-MMO-010/W153-PDG
3. Wall Charts:
 - a. A-101-0168-F0147-23
4. Equipment:
 - a. "CLASSIFIED SESSION" sign

Trainee Preparation

A. Trainee Support Material:

1. None

Whenever material should be reviewed by the trainee before the topic, it should be listed.

B. Reference Publications:

1. None

All listings on the topic pages, except prefaulted modules, should be listed in alphanumeric order.

Instructor Preparation

F0147-1-1-2

Topic 1. GENERAL AND DOCUMENTATION DESCRIPTION OF THE POWER DISTRIBUTION GROUP

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

b. Power distribution black panel

c. Power distribution red panel

d. Component compartment

e. Ground fault indicator panel

5. Technical documentation

a. Communications Central AN/BSC-1
operation and maintenance instructions

The standard rules for capitalization (proper names, titles, etc.) apply to discussion points. For the ECS components, subsystem names and equipment nomenclature are capitalized, but common names are not (e.g., Buoy Depth Control Unit C-10258/BRR-6 is capitalized, because it is the nomenclature; whereas buoy depth control unit is not, because it is the common name).

5. Refer to Information Sheet F0147-1-1-1.

Topic 2: GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

LAB PERIODS: _____
CLASS PERIODS: 3

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. State the functions of the AN/BRR-6.
2. State the major functions of AN/BRR-6 consisting of: Include the function of each to support normal operations.
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6
 - g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6

- I. Antenna Control Indicator C-10257/BRR-6
- j. Buoy Depth Control Indicator C-10258A/BRR-6
- k. Relay Assembly RE-1115/BRR-6
- l. Interconnecting Box J-3461/BRR-6
- m. Towed Array Control Indicator Panel

Subitems should appear exactly as they do on the PPP table.

3. Define the abbreviations and terms used with the AN/BRR-6 to support all operations and preventive maintenance.
4. State the operational characteristics and capabilities of the AN/BRR-6 to support all operations and preventive maintenance.
5. State the security requirements for the AN/BRR-6 to support all operations and preventive maintenance.

A-5-37

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2: GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6 - Continued.

6. Describe all major and associated components of the AN/BRR-6 to support all operations and preventive maintenance. Include names, nomenclature, physical appearance, reference designators, locations, and construction features.
- a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6
 - g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6
 - i. Antenna Control Indicator C-10257/BRR-6
 - j. Buoy Depth Control Indicator C-10258A/BRR-6

- k. Relay Assembly RE-1115/BRR-6
- l. Interconnecting Box J-3461/BRR-6
- m. Towed Array Control Indicator Panel

The TB-18A/BRR-6 and EE126-FA-MMF-010/E110-BRR-6 are fictitious and used for illustration purposes only.

7. Describe the controls and indicators directly associated with the AN/BRR-6 to support all operations and preventive maintenance. Include names, reference designators, positions, conditions, colors, locations, and functions.

TLOs should contain only those "include" statements that are applicable to the subject matter and TOS level being covered (e.g., construction features may not be applicable to every physical description topic).

8. Describe how the AN/BRR-6 works (functional operation) to support all operations and preventive maintenance. Include signal flow, sequential operation, and indications.

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

(1) Name/nomenclature

(2) Location/reference designator

(3) Physical appearance/construction
features

(4) Function

d. Buoy Cradle MT-4905/BRR-6 (Unit 4)

d. Reference paragraph 1-2.5.

(1) Name/nomenclature

F0147-1-2-9

A-5-45

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

(2) Location/reference designator

(3) Physical appearance/construction features

(4) Function

e. Reeling Machine RL-275/BRR-6 (Unit 5)

e. Reference paragraphs 1-2.6, 3-3, 3-4.1, and 3-4.2.1.

(1) Drum assembly

F0147-1-2-10

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

(a) Name/nomenclature

(b) Location/reference designator

(c) Physical appearance/construction
features

(d) Function

(2) Aft tension sheave assembly

(a) Name/nomenclature

F0147-1-2-11

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

- (b) Location/reference designator

 - (c) Physical appearance/construction features

 - (d) Function
- (3) Drive Unit
- (a) Name/nomenclature

 - (b) Location/reference designator

F0147-1-2-12

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

(c) Physical appearance/construction features

(d) Function

f. Sensor Group OA-8906/BRR-6 (Unit 6)

f. Reference paragraphs 1-2.7 and 3-4.3.3.

(1) Name/nomenclature

(2) Location/reference designator

(3) Physical appearance

Note that not all sub-DPs apply to the sensor group ("construction features" is missing from item f(3)), but the same structure is retained.

A-5-49

F0147-1-2-13

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

(4) Function

g. Buoy Door Sensing Switch

g. Reference figure 3-2 and paragraph 3-4.3.1.

(1) Name/nomenclature

(2) Location/reference designator

(3) Physical appearance/construction features

(4) Function

F0147-1-2-14

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

h. Buoy Control Indicator C-10256A/BRR-6
(Unit 8)

h. Reference paragraph 1-2.8.

(1) Name/nomenclature

(2) Location/reference designator

(3) Physical appearance/construction
features

(4) Function

A-5-51

F1047-1-2-15

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

(5) Controls and indicators

(5) Refer to figure 2-1 and table 2-1.

(a) Names

(b) Locations/reference designators

(c) Positions/conditions/colors

(d) Functions

Note that this is a case where, rather than have a first level DP for the "controls and indicators" TLO, the controls and indicators are covered with the physical description of the unit.

A-5-52

F0147-1-2-16

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

i. Antenna Control Indicator C-10257/BRR-6

i. Display Wall Chart A-101-0168-F0147-1.
Reference paragraphs 1-2.9, 3-1.4,
3-4.1, and 3-4.2.3.

5. Functional operation

5. Refer to EE125-FA-MMF-010, figure 1-3.
Reference paragraphs 3-1.1 through 3-4.3.3.

a. Signal flow

b. Sequential operation

c. Indications

F0147-1-2-17

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

6. Functional interface

5. Refer to figure 5-1, sheet 2 of 3.

a. Power sources

b. Input signals

c. Output signals

7. Operational characteristics and Capabilities

7. Refer to table 1-1. Reference paragraphs 1-2.1 and 3-1.1.

A-5-54

F0147-1-2-18

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

Topic 2. GENERAL, PHYSICAL, FUNCTIONAL, AND INTERFACE DESCRIPTION OF THE AN/BRR-6

DISCUSSION POINT

RELATED INSTRUCTOR ACTIVITY

8. Review and summary

9. Assignment

9. Make study assignments if required.

A-5-55

F0147-1-2-19

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 3: OPERATIONAL DESCRIPTION OF THE DSS

LAB PERIODS: _____
CLASS PERIODS: 1.50

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. Describe the authority and regulations pertaining to normal operation of the following equipment, including external equipments which interface with them.
 - a. TSEC/KG-84C
 - b. TSEC/KG-36
 - c. TSEC/KWR-46
 - d. TSEC/KY-75
 - e. TSEC/KY-58
2. Describe the authority and regulations pertaining to all operations of the DSS and the following equipment, including external equipments which interface with them.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG

3. Describe the routine pre-operational, operational, and post-operational tasks for normal operation of the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
 - c. TSEC/KG-84C
 - d. TSEC/KG-36
 - e. TSEC/KWR-46
 - f. TSEC/KY-75
 - g. TSEC/KY-58
4. Describe indications which may occur during normal operation of the DSS and the following equipment. Include alarms, indicators, and displays.
 - a. TSEC/KG-84C
 - b. TSEC/KG-36
 - c. TSEC/KWR-46

A-5-56

F0147-1-3-1

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 3: OPERATIONAL DESCRIPTION OF THE DSS - Continued.

- d. TSEC/KY-75
- e. TSEC/KY-58
- 5. Describe indications which may occur during all operations of the DSS and the following equipment. Include alarms, indicators, and displays.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
- 6. Describe casualty/degraded/abnormal modes of operation for the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
- 7. Describe personnel and equipment safety precautions which are to be observed during normal operation of the DSS and the following equipment.
 - a. TSEC/KG-84C

- b. TSEC/KG-36
- c. TSEC/KWR-46
- d. TSEC/KY-75
- e. TSEC/KY-58
- 8. Describe personnel and equipment safety precautions which are to be observed during all operations of the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG

Trainee Preparation

Topic 4: MAINTENANCE DESCRIPTION OF THE ECS

LAB PERIODS: _____
CLASS PERIODS: 1.75

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. Define the maintenance policy for the ECS and the following subsystems and equipment required to support preventive maintenance as the requirement for periodic performance of tasks to minimize equipment malfunctions. Including: Servicing - scheduled or unscheduled inspections, cleaning, lubrication, corrosion control and any other function in support of maintaining and equipment full mission capable; and Operational checks (Confidence or Performance checks, and Degradation/deterioration checks).

- a. Control, Monitor, and Test (CMT) Subsystem
 - (1) Interface Unit J-3565/BSC-1 (Message Interface Unit)
 - (2) Interface Unit J-3566/BSC-1 (Digital Interface Unit Interface)
 - (3) Interface Unit J-3568/BSC-1 (HSP/Magnetic Tape Unit Interface Unit)

- (4) Recorder-Reproducer Control C-10447/BSC-1
- (5) Recorder-Reproducer Unit RD-442/BSC-1
- (6) Comparator CM-507/BSC-1
- b. Data Switching Subsystem (DSS)
 - (1) SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - (2) Signal Data Converter CV-3510B/UG
- c. Very Low Frequency/Low Frequency (VLF/LF) Subsystem
 - (1) Radio Receiver R-2109/BSC-1
 - (2) Radio Receiver R-2320/URR
 - (3) Digital Data Processor CP-1071B/WR
 - (4) Digital Data Demodulator MD-1191/WRR-7B
 - (5) Electrical Equipment Enclosure CY-8410/WRR-7B

F0147-1-4-1

LESSON PLAN

1. INTRODUCTION TO AND THEORY OF THE POWER DISTRIBUTION GROUP

A-111-4251 REV A

Topic 4: MAINTENANCE DESCRIPTION OF THE ECS - Continued.

- (6) Power Supply PP-8098/BSC-1
- d. High Frequency/Ultra High Frequency (HF/UHF) Subsystem
 - (1) Radio Receiver-Transmitter RT-1107(V)12/WSC-3(V)
 - (2) Voice Switch Unit Control C-10975
 - (3) Command Center Telephone Terminal
- e. Support Subsystem
 - (1) Teleprinter TT-624/UG
 - (2) Power Distribution Group
 - (3) Audio Tape Recorder CMS 1022
 - (4) AN/BSC-1 Electronic Equipment Air Coolers
- f. Antenna Suite
 - (1) Multifunction Mast Antenna Group OE-207/BR
 - (2) Towed Buoy Antenna AN/BRR-6

- 2. Describe preventive maintenance procedures for the ECS and the subsystems and equipment listed in learning objective 1. Include recognition and interpretation of indications, records, reports, and instructions.
- 3. Describe personnel and equipment safety precautions, including tag-out procedures, which are to be observed while performing preventive maintenance on the ECS and the subsystems and equipment listed in learning objective 1.

Where ten or more sub-items exist for a series of TLOs, it is permissible to have the listing appear in the first TLO only. Then, refer back to that learning objective in the remaining TLOs.

Topic 1: Basic Operation and Operation of the DSS

LAB PERIODS 3

CLASS PERIODS: 0.

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. Perform routine pre-operational, operational, and post-operational tasks for normal operation of the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
 - c. TSEC/KG-84C
 - d. TSEC/KG-36
 - e. TSEC/KWR-46
 - f. TSEC/KY-75
 - g. TSEC/KY-58

2. Recognize and interpret all indications occurring during the performance of normal operating procedures, and perform appropriate operator actions in proper sequence on the DSS and the following equipment.
 - a. TSEC/KG-84C
 - b. TSEC/KG-36
 - c. TSEC/KG-46
 - d. TSEC/KY-75
 - e. TSEC/KY-58
3. Recognize and interpret all indications occurring during the performance of all operating procedures, and perform appropriate operator actions in proper sequence on the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG

LESSON PLAN

2. BASIC OPERATION AND OPERATION OF THE DATA SWITCHING SUBSYSTEM (DSS)

A-111-4251 REV A

Topic 1: Basic Operation and Operation of the DSS - Continued.

4. Perform tasks in the casualty/degraded/ab-normal modes of operation of the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
 - b. Signal Data Converter CV-3510B/UG
5. Adhere to personnel and equipment safety precautions during normal operational procedures of the DSS and the following equipment.
 - a. TSEC/KG-84C
 - b. TSEC/KG-36
 - c. TSEC/KG-46
 - d. TSEC/KY-75
 - e. TSEC/KY-58
6. Adhere to personnel and equipment safety precautions during all operational procedures of the DSS and the following equipment.
 - a. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units

- b. Signal Data Converter CV-3510B/UG

Trainee Preparation

A. Trainee Support Material:

1. Study Job Sheets F0147-2-1-1 through F0147-2-1-3.

B. Reference Publications:

1. Study EE109-AL-MMO-010/W153-DSS, tables 2-15 and 2-19.
2. Study KAO-83E/TSEC, sections 2007 and 3003a.
3. Study KAO-137E/TSEC, section 5102.
4. Study KAO-154B/TSEC, section 3002.
5. Study KAO-168B/TSEC, paragraph 3-2.
6. Study KAO-207A/TSEC, paragraph 3.10.d.
7. Study NAVSEA S9SSB-X9-SSM-84E/(U) 726V6P3B7E-2 (SSM V6P3B7E-2), AP 704-5.

LETTER OF PROMULGATION

SAFETY/HAZARD AWARENESS NOTICE

All personnel involved in operation or maintenance of electronic equipment must be thoroughly familiar with the electronic equipment safety precautions contained in Electronic Installation and Maintenance Book (SE000-00-EIM-100), section 3, and NSTM, Electronics, chapter 400, (S9086-ND-STM-000/ch. 400), section 2. In addition, attention is directed to the Accident Prevention Manual, OPNAVINST 5100.19 series, and Safety Policy and Procedures for Conducting Training, CNETINST 1500.20 series.

This equipment employs voltages which are dangerous and may be fatal if contacted by operating or maintenance personnel. Extreme caution must be exercised when working with this equipment. Hazard awareness dictates that this equipment must always be viewed as an integral part of a system and not as a component. While every practical precaution has been incorporated into this equipment, it is not possible or practical to try to list every condition or hazard that you may encounter. Therefore, all operating or maintenance personnel must at all times observe as a minimum, the following:

Don't service or adjust alone. Under no circumstances will a person operate or maintain equipment without the immediate presence or assistance of another person capable of rendering aid. Unless under direct supervision of a qualified person, no person shall operate or maintain equipment for which he is not qualified.

Don't tamper with interlocks. Reliance on interlock circuits to remove power from the equipment is never to be assumed. Until operation of the interlock is verified, equipment is assumed to be in the hazardous mode of operation. Under no circumstances will any access gate, door, or interlock switch be removed, bypassed or modified in any way by other than authorized maintenance personnel and then only after observing proper tag-out procedures.

Training Time Out. Any time a trainee or instructor has apprehension concerning his personal safety, or that of another, he shall verbally or physically signal "TRAINING TIME OUT" to stop the exercise and receive or provide additional instruction as appropriate in accordance with CNETINST 1500.20 series.

Report all hazards. If at any time you detect a hazard, it is your responsibility to report the hazard to ensure that it is corrected. If at any time you detect a "new" or "suspected new" hazard, particularly due to equipment installation, modification or repair, it is your responsibility to ensure that a SAFETYGRAM is submitted to the Naval Safety Center, Norfolk, VA, in accordance with OPNAVINST 5100.19 series. This will ensure that this hazard will be investigated, publicized, or corrected, as required.

The Pre-Mishap plan explains the procedures to follow and essential telephone numbers to call in case of an accident or emergency. It is located by the emergency exit in the laboratory.

SECURITY AWARENESS NOTICE

In the event that classified information is added to this Trainee Guide as a result of instructor personalization, the Trainee Guide shall be marked and handled in accordance with the regulations of the latest edition of the Department of the Navy Supplement to the DoD Information Security Program Regulation OPNAVINST 5510.1 series.

HOW TO USE YOUR TRAINEE GUIDE

TRAINEE GUIDE

This publication is now in your custody and is for your use while learning *theory of operation, adjustment, alignment, and maintenance of the Exterior Communications System (ECS) Eclectic System*. **[Tailor to specific course.]**

You may not mark any pages in this book except for *Job Sheets, Diagram Sheets, Problem Sheets, and the Trainee Name Page*. **[Tailor to specific course.]**

Upon completion of this course of instruction return this Trainee Guide to your instructor.

OTHER PUBLICATIONS

Reference publications contain most of the information needed for this equipment but were not prepared for training use.

This Trainee Guide was prepared to guide your training on this equipment and prepare you to use the equipment documentation in maintaining (*or operating*) the Exterior Communications System (ECS) Eclectic System.

Several other pertinent publications will be referred to frequently during the course.

PRESENTATION OF COURSE MATERIAL

The course material on the Exterior Communications System (ECS) Eclectic System is divided into Sections and Topics, presented in a logical sequence. *Operation, adjustment, alignment, troubleshooting, and efficient use of maintenance aids (documentation and test equipment) are stressed*. **[Tailor to specific course.]** The knowledge and skills to be acquired are stated for each topic so that you can check your progress.

Assignments in publications are given for study. The effectiveness of this Trainee Guide depends upon the conscientious accomplishment of the reading and study assignments in the reference publications.

WRITTEN AND PERFORMANCE TESTS

A testing program consisting of written and practical performance tests will be administered by the instructor.

HOW TO USE YOUR TRAINEE GUIDE - Continued.

SAFETY PRECAUTIONS

Voltages present in this and associated equipment are extremely dangerous. Read the Safety Precautions carefully and be aware of dangerous voltages when working on the equipment. Practice safety while learning about this equipment. Take time to be safe.

If you have any apprehension concerning your personal safety or that of another you shall verbally signal "Training Time Out" to the instructor to stop the exercise.

SECURITY

In the event that classified information is added to this Trainee Guide as a result of trainee notes, the Trainee Guide shall be marked and handled in accordance with the regulations of the latest edition of the Department of the Navy Supplement to the DoD Information Security Program Regulation (OPNAVINST 5510.1 series).

COURSE LEARNING OBJECTIVES

Upon successful completion of this course, the trainees will have acquired the following knowledge and skills and be able to:

Knowledge:

1. Describe the theory necessary to support and understand the performance of normal and degraded operational tasks and all preventive maintenance without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the following:
 - a. TRIDENT Exterior Communications System (ECS)
 - b. Data Switching Subsystem (DSS)
 - c. Power Distribution Group
 - d. Towed Buoy Antenna AN/BRR-6

2. Describe the theory necessary to support and understand the performance of documented fault isolation and repair without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the following:
 - a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
 - b. SA-2199/BSC-1, SA-2200/BSC-1, and SA-2201/BSC-1 Switching Units

3. Describe the theory necessary to support undocumented fault isolation and repair requiring advanced analysis without going into signal or electrical flow, computer instructions, or detailed mechanical component breakdown except for those mechanical or logic elements or circuits unique to the equipment or program of the Interface Unit J-3565/BSC-1 (Message Interface Unit).

Skills:

1. Perform normal and degraded operational procedures with supervision on the following:
 - a. TRIDENT Exterior Communications System (ECS)
 - b. Data Switching Subsystem (DSS)
 - c. Power Distribution Group
 - d. Towed Buoy Antenna AN/BRR-6

2. Perform preventive maintenance procedures with supervision on the following:
 - a. TRIDENT Exterior Communications System (ECS)
 - b. Data Switching Subsystem (DSS)

COURSE LEARNING OBJECTIVES - Continued

- c. Power Distribution Group
 - d. Towed Buoy Antenna AN/BRR-6
3. Perform, with supervision, documented fault isolation and repair procedures to the authorized maintenance level on the following:
- a. PP-7474/BSC-1, PP-7475/BSC-1 Power Supplies
 - b. SA-2199/BSC-1, SA-2200/BSC-1, SA-2201/BSC-1 Switching Units
4. Perform fault isolation and repair of faults that cannot be located using procedures contained in prescribed documentation or that require advanced analysis, with supervision, on the Interface Unit J-3565/BSC-1 (Message Interface Unit).

COURSE MASTER SCHEDULE

A-111-4251

Length of Period: 50 minutes

WEEK 1

DAY 1

TOPIC NO.	TYPE	PERIOD	TOPIC	RATIO
F0147.1.1	Class	1	General and Documentation Description of the Power Distribution Group	25:1
F0147.1.2	Class	2	General, Physical, Functional, and Interface Description of the AN/BRR-6	25:1
F0147.1.2	Class	3	Same	25:1
F0147.1.2	Class	4	Same	25:1

Only Part F0147, Sections 1 and 2 are used as examples in Volume II. The others are intentionally omitted.

WEEK 3

DAY 1

TOPIC NO.	TYPE	PERIOD	TOPIC	RATIO
F0147.1.10	Test	81	Power Distribution Group	25:1
F0147.2.1	Class	82	Basic Operation of the DSS	25:1
F0147.2.1	Lab	11	Same	10:1

ASSIGNMENT SHEET F0147-1-2-1

GENERAL, PHYSICAL, FUNCTIONAL, AND
 INTERFACE DESCRIPTION OF THE AN/BRR-6

INTRODUCTION

This lesson will show how the AN/BRR-6 operates and its effect on the system as a whole.

TOPIC LEARNING OBJECTIVES

Upon successful completion of this topic, you will be able to:

1. State the functions of the AN/BRR-6.
2. State that the AN/BRR-6 consists of the following major functional areas. Include the function of each to support normal operations.
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6
 - g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6
 - i. Antenna Control Indicator C-10257/BRR-6
 - j. Buoy Depth Control Indicator C-10258A/BRR-6
 - k. Relay Assembly RE-1115/BRR-6
 - l. Interconnecting Box J-3461/BRR-6
 - m. Towed Array Control Indicator Panel
3. Define the abbreviations and terms used with the AN/BRR-6 to support all operations and preventive maintenance.
4. State the operational characteristics and capabilities of the AN/BRR-6 to support all operations and preventive maintenance.
5. State the security requirements for the AN/BRR-6 to support all operations and preventive maintenance.

FOR TRAINING USE ONLY

6. Describe all major and associated components of the AN/BRR-6 to support all operations and preventive maintenance. Include names, nomenclature, physical appearance, reference designators, locations, and construction features.
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6
 - g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6
 - i. Antenna Control Indicator C-10257/BRR-6
 - j. Buoy Depth Control Indicator C-10258A/BRR-6
 - k. Relay Assembly RE-1115/BRR-6
 - l. Interconnecting Box J-3461/BRR-6
 - m. Towed Array Control Indicator Panel
7. Describe the controls and indicators directly associated with the AN/BRR-6 to support all operations and preventive maintenance. Include names, reference designators, positions, conditions, colors, locations, and functions.
8. Describe how the AN/BRR-6 works (functional operation) to support all operations and preventive maintenance. Include signal flow, sequential operation, and indications.
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6

FOR TRAINING USE ONLY

- g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6
 - i. Antenna Control Indicator C-10257/BRR-6
 - j. Buoy Depth Control Indicator
C-10258A/BRR-6
 - k. Relay Assembly RE-1115/BRR-6
 - l. Interconnecting Box J-3461/BRR-6
 - m. Towed Array Control Indicator Panel
9. Describe the functional interface between the AN/BRR-6 and related external equipments to support all operations and preventive maintenance.
- a. Power sources
 - b. Input signals
 - c. Output signals

STUDY ASSIGNMENT

1. Study EE125-FA-MMF-010/E110-BRR-6, FOMM Technical Manual Support Volume for Radio Receiving Set AN/BRR-6, Volume 1, glossary; tables 1-1 and 2-1 through 2-7; paragraphs 1-1, 1-2, 1-2.1 through 1-2.12, and 1-3 through 1-6; and figures 2-1 through 2-8, 5-1, and 5-3.
2. Study NAVSEA S9SSB-X9-SSM-900/(U)726V6P3B13 (SSM V76P3B13), Habitability, Ship Handling, and Emergency Systems Operating Instructions, OI 637-11, paragraph 1-1.

STUDY QUESTIONS

1. How many units comprise the BRR-6?
2. What is the frequency range of the BRR-6?
3. What is the maximum speed allowable for towing the buoys?
4. What is the maximum speed for launching a buoy?
5. Is it good practice to stream the buoyant cable and fly a buoy at the same time?

FOR TRAINING USE ONLY

6. How many buoys are associated with each BRR-6?
7. What is the minimum depth for launching a buoy?
8. How much cable does each cable have?
9. What does FOMM mean?
10. Which units of the BRR-6 are located in the IRR?
11. Which units of the BRR-6 are located in the Command and Control Center?
12. How many antennas are associated with the Towed Buoy?
13. What is the purpose of the Depth and Destruct Canister? Where is it located?
14. Which unit controls all the buoy electronics?
15. How close to the surface must the buoy be before Unit 10 can take over depth control?
16. How does Unit 9 (Towed Buoy Antenna Control Unit) communicate with the buoy electronics?
17. Where are the tow cable cutters located?
18. Where does the BRR-6 receive its 115 vac 60 Hz power from?
19. Do the navigation center signals go through the AIS cabinet in the IRR?

FOR TRAINING USE ONLY

OUTLINE SHEET F0147-1-2-1

GENERAL, PHYSICAL, FUNCTIONAL, AND
INTERFACE DESCRIPTION OF THE AN/BRR-6

INTRODUCTION

This lesson will show how the AN/BRR-6 operates and its effect on the system as a whole.

TOPIC OUTLINE

1. Security requirements
2. Functions of the AN/BRR-6
3. Abbreviations and terms
4. Major functional areas/major and associated components
5. Functional operation
6. Functional interface
7. Operational characteristics and capabilities

NOTE TO READER: This Outline Sheet was developed to leave room for the trainee to take notes.

FOR TRAINING USE ONLY

INFORMATION SHEET F0147-1-3-1

SAFETY POLICY FOR CONDUCTING TRAINING

A. INTRODUCTION

1. This information sheet is designed to provide you with an understanding of Navy policy regarding training safety.
2. This information sheet covers "Training Time Out" procedures that are to be used during the conduct of this course.

B. REFERENCES

1. CNETINST 1500.20 series, Safety Procedures for Conducting Training in Arduous or Potentially High Risk Activities

C. INFORMATION

1. The mission of the Navy dictates the need for an aggressive training program to prepare personnel to perform professionally and competently in many high risk activities under diverse and possible adverse conditions. Potentially high risk training includes, but is not limited to, training requiring exposure to potentially hazardous conditions involving the environment (water entry, temperature extremes), atmosphere (fire fighting, use of solvents), explosives (weapons), electrical mechanical or hydraulic training devices or equipments.
2. It is the policy of the Chief of Naval Education and Training (CNET) to provide required training under controlled conditions, within practical and realistic limits, to obtain desired training outcomes while maintaining the maximum margin of safety. Included in this policy is the requirement that in the event a trainee is apprehensive of his personal safety while undergoing training, that concern shall be addressed.

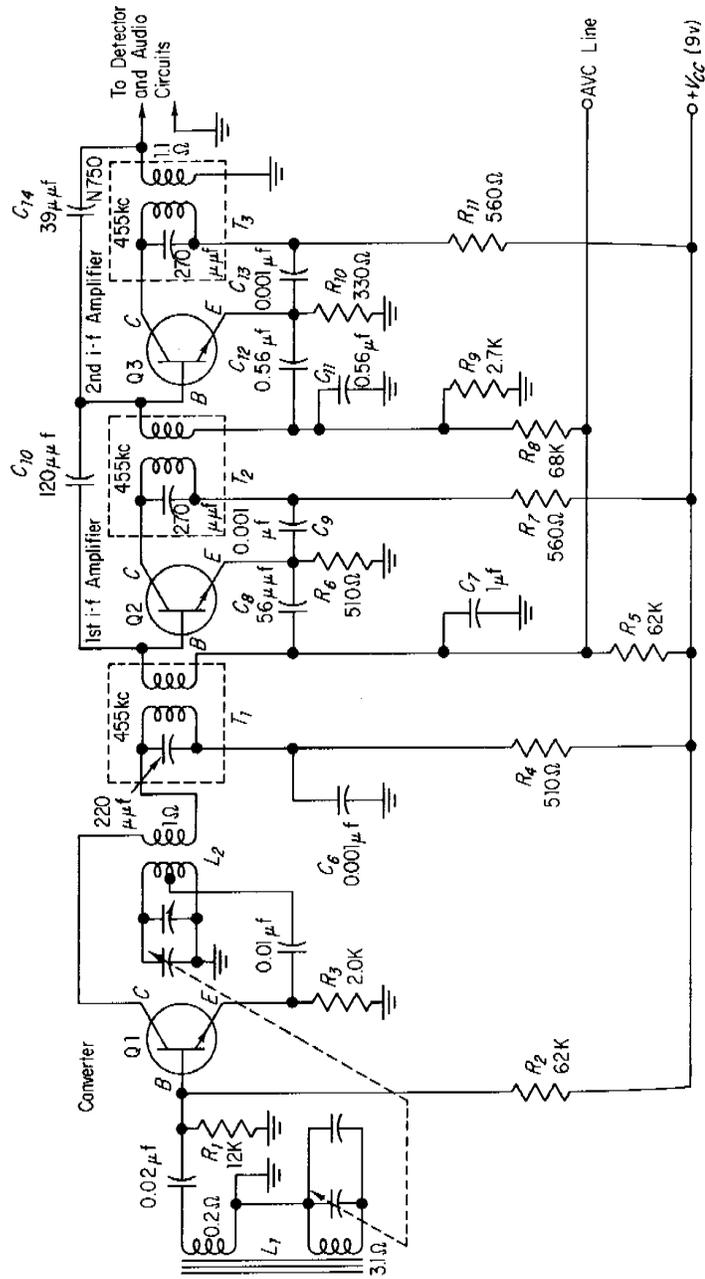

D. TRAINING TIME OUT (TTO)

1. Any time a trainee or Instructor has apprehension concerning his personal safety or that of another, he shall verbally signal "TRAINING TIME OUT" to stop the exercise and receive or provide additional instruction as appropriate in accordance with CNETINST 1500.20 series.

FOR TRAINING USE ONLY

F0147-1-4-1

FOR TRAINING USE ONLY

JOB SHEET F0147-5-1-1

POWER SUPPLIES PP-7474/BSC-1 AND PP-7475/BSC-1
 ADJUSTMENT PROCEDURES

A. INTRODUCTION

1. This job sheet will aid you in becoming proficient in performing adjustments on the Power Supply PP-7474/BSC-1 to support documented corrective maintenance.
2. You will be evaluated on your observance of safety precautions during performance of this job sheet. In addition, strict adherence to documented procedures will be closely monitored.

B. EQUIPMENT

1. AN/BSC-1 Trainer
2. Test Equipment
 - a. Digital Multimeter, Fluke Model 8600A-01, SCIN/SCAT 4212
3. Tools
 - a. Flat-tip screwdriver, 8-inch, 5/16-inch tip, LCA 1613
 - b. Offset screwdriver, NSN 5120-00-287-2130
 - c. Open end wrench, 1/2-inch, 4-inch, LCA 2516
 - d. Phillips screwdriver, No. 2, 8-inch, LCA 2838

C. REFERENCES

1. EE109-AL-MMO-010/W153-DSS, Data Switching Subsystem Operation and Maintenance Instructions, Volume 1

NOTE: The adjustment procedures for the Power Supply PP-7474/BSC-1 are identical to the adjustment procedures for the Power Supply PP-7475/BSC-1.

FOR TRAINING USE ONLY

D. JOB STEPS

Step 1. Perform the power supply voltage checks as described in paragraphs 6-2.a through 6-2.a(4) and table 6-2. Record your readings in the spaces provided. Inform the instructor of any out of tolerance readings.

PS1: _____ PS2: _____ PS3: _____

INSTRUCTOR CHECK _____
SAT

Step 2. Perform the power supply voltage adjustments as described in paragraphs 6-2.a(5) through 6-2.a(12) to correct the power supply(s) which are not within the specified tolerances.

INSTRUCTOR CHECK _____
SAT

Step 3. Return the equipment to its original operating condition.

INSTRUCTOR CHECK _____
SAT

FOR TRAINING USE ONLY

PROBLEM SHEET F0147-5-1-1

A. INTRODUCTION

This Problem Sheet will help you become proficient at troubleshooting the Power Supply PP-7474/BSC-1 using the authorized technical documentation.

B. REFERENCES

1. EE109-AL-MMO-010\W153-DSS, Data Switching Subsystem Operation and Maintenance Instructions, Volume I.

C. PROBLEM

Using the authorized technical documentation, list in logical order the troubleshooting steps required to isolate the problem.

D. GIVEN

Each PP-7474/BSC-1 Power Supply malfunction can be identified and isolated using the authorized technical documentation.

E. INITIAL CONDITIONS

An operator of the Data Switching Subsystem reports that the system will power up but will not remain online.

F. REQUIRED RESPONSES

1. Locate the symptom index
-

2. Locate the symptom
-

3. Where are the recommended tests and inspections located?
-

FOR TRAINING USE ONLY

4. Locate the "Troubleshooting and Diagnosing" chapter.

5. Once the problem has been identified, the technical documentation and the steps required to correct the problem.

TESTING PLAN FOR:

A-111-4251 REV A
TRIDENT EXTERIOR COMMUNICATIONS SYSTEM (ECS)
MODEL CURRICULA

TESTS AND METHODS

The purpose of this Testing Plan is to establish procedures which will be used in evaluating the trainee's performance on attaining the objectives of the course. Performance for the A-111-4251 REV A course is measured by the following:

1. Written Progress Test
2. Performance Test
3. Practical Work

Tests are as follows:

Written Progress Test - A written test with a minimum of 30 questions is administered at the end of Section 1, Topic 4. The following TLO's must be tested: 1-1-2, 1-1-4, 1-2-2, 1-2-4, 1-2-6, 1-2-8, 1-3-2, 1-3-4, 1-3-5, 1-4-2, and 1-4-3. Additional TLO's may be selected for testing to make up a test with a minimum of 30 questions.

Performance Test - A skill test is administered at the end of Section 2, Topic 1 utilizing Job Sheet F0147-2-1-1 and Administrator Guide (minimum score of 70% is required).

Performance Test - A skill test is administered at the end of Section 3, Topic 1 utilizing Job Sheet F0147-3-1-1 and Administrator Guide (minimum score of 70% is required).

Written Progress Test - A written test with a minimum of 30 questions is administered at the end of Section 4, Topic 5. The following TLO's must be tested: 4-1-2, 4-2-1, 4-2-3, 4-3-2, 4-3-3, 4-3-4, 4-3-5, 4-4-2, 4-5-3, 4-5-4, 4-4-5, 4-4-6, and 4-5-8. Additional TLO's may be selected for testing to make up a test with a minimum of 30 questions.

Performance Test - A skill test is administered at the end of Section 5, Topic 1 utilizing Job Sheet F0147-5-1-1 and Administrator Guide (minimum score of 70% is required).

Written Progress Test - A written test with a minimum of 30 questions is administered at the end of Section 6, Topic 3. The following TLO's must be tested: 6-1-2, 6-2-2, 6-3-2, 6-3-3, 6-3-4, 6-3-5, and 6-3-7. Additional TLO's may be selected for testing to make up a test with a minimum of 30 questions.

Performance Test - A skill test is administered at the end of Section 7, Topic 1 utilizing Job Sheet F0147-7-1-1 and Administrator Guide (minimum score of 70% is required).

TESTING CONSTRAINTS

There are no constraints which prevent achievement of all course objectives.

PERFORMANCE TEST PROCEDURES AND NUMERICAL GRADE

Performance tests are administered individually. Performance tests are given to evaluate the trainee's overall skills taught in the course. The instructor/evaluator uses checklists and rating scales to evaluate the trainee. The standard for the performance tests is 70%. All critical steps must be performed without error. Trainees will be allowed one retake. Prior to the retake, the instructor will provide specific feedback to the trainee as to his or her performance on the failed test to allow the trainee to correct any problems. Additional practice may be required of the trainee prior to retaking the test. Trainees who are not able to meet the standard after the retest will be recommended for an Academic Review Board. Performance tests will be critiqued.

MINIMUM PASSING GRADE

All tests are criterion-referenced in that they measure the trainees' actual knowledge or performance against criteria derived from learning objectives. The minimum grade for the A-111-4251 REV A course is 70%, based on evaluation of the learning objectives and determination that the minimum passing grade needs to be at or above the point of average understanding.

WEIGHTING CRITERIA FOR COMPUTING FINAL COURSE GRADES

Comprehensive Tests	30% X (Trainee's Grades)	= _____
Performance Tests	60% X (Trainee's Grades)	= _____
Practical Work	10% X (Trainee's Grades)	= _____

Total = Final Course Grade

WRITTEN PROGRESS TEST PROCEDURES

Written Progress tests are administered to the entire class. Results of the tests are used to evaluate the trainee's progress in the course. The minimum passing grade is 70%.

PRACTICAL WORK GRADES

Practical work grades for the course consist of graded homework and assignment sheets. The practical work grades will be averaged and will count as a percentage of the final grade as indicated on the Weighting Criteria area of this testing plan. If problem areas occur during practical work they will be remediated during class.

REMEDICATION

A trainee who scores at or above the minimum passing score will be immediately remediated in class to their specific problem areas. A trainee who scores below the minimum passing score will be subject to instructor oral remediation and night study. In addition the trainee will be retested as soon as possible. Trainees will be allowed one retake. Trainees who fail the retake will be recommended for an Academic Review Board.

I. Instructions To Administrator

A. Prior to the start of testing:

1. Cover or Remove all training materials that could assist the trainees in answering test items.
2. Inform trainees that they have 50 minutes for the test.
3. Provide pencils and scratch paper as necessary.
4. Read the test instructions to the trainees.
5. Provide pertinent reference documentation.
6. Honor local instruction pertinent to testing as applicable.

B. After completing the test:

1. Collect and inventory all testing material.
2. Check test for marks made by trainees.
3. Review test with trainees.
4. Evaluate any test challenged by trainees.
5. Apply local instructions as necessary.

II. EVALUATION INSTRUMENT N/A

III. GRADING CRITERIA

As per NAVEDTRA 135, Appendix B7, *Translation of the Raw Score on a Written Test to a Grade.*

IV. INSTRUCTIONS TO THE TRAINEE

- A. This is a completion or short answer test.
- B. On the answer sheet print your name and social security number.
- C. Anyone caught cheating fails and is subject to disciplinary action.
- D. The time to take this test is 50 minutes.
- E. This test completes Your Knowledge Course Learning Objective 1.

TEST #11111
Revised_____

1. The function of the Power Distribution Group is
to _____.
2. List the major functional areas of the Power Distribution Group.
 - a.
 - b.
 - c.
 - d.
 - e.
3. The function of the AN/BRR-6 is to_____.
4. List the function of each to support normal operation of the AN/BRR-6.
 - a. Towed Buoy TB-17/BRR-6 (Bangor) or Towed Buoy TB-18A/BRR-6 (Kings Bay)
 - b. Receiver Group OR-197/BRR-6
 - c. Special Purpose Electrical Cable Assembly CX-13053/BRR-6
 - d. Buoy Cradle MT-4905/BRR-6
 - e. Reeling Machine RL-275/BRR-6
 - f. Sensor Group OA-8906/BRR-6
 - g. Buoy Door Sensing Switch
 - h. Buoy Control Indicator C-10256A/BRR-6

I. Instructions To Administrator

A. Prior to the start of testing:

1. This job sheet will aid you in becoming proficient in performing adjustments on the Power Supply PP-7474/BSC-1 to support documented corrective maintenance.
2. You will be evaluated on your observance of safety precautions during performance of this job sheet. In addition, strict adherence to documented procedures will be closely monitored.
3. Inform trainees that they have 50 minutes for the test.
4. Provide pencils and scratch paper as necessary.
5. Provide pertinent reference documentation
6. Honor local instruction pertinent to testing as applicable.

EQUIPMENT

1. AN/BSC-1 Trainer
2. Test Equipment
 - a. Digital Multimeter, Fluke Model 8600A-01, SCAN/SCAT 4212
3. Tools
 - a. Flat-tip screwdriver, 8-inch, 5/16-inch tip, LA 1613
 - b. Offset screwdriver, NSN 5120-00-287-2130
 - c. Open end wrench, 1/2-inch, 4-inch, LA 2516
 - d. Phillips screwdriver, No. 2, 8-inch, LA 2838

B. After completing the test:

1. Collect and inventory all tools.
2. Shut down all power supplies.
3. Review test with trainees.

4. Evaluate any test area challenged by trainees.
5. Apply local instructions as necessary.

II. Evaluation Instrument

- A. Job sheet No. 4-5-1-1
- B. Steps: There are 2 steps to be evaluated. They are the PE checks and the PE adjustments.
- C. Description of errors: The most common error made by the trainee is reading multimeter wrong.

III. Grading Criteria

- A. Step 1=checklist evaluation as satisfactory/unsatisfactory on the reading.
- B. Step 2=Rating scale based on time, accuracy(+/-5%), safety, use of equipment, and procedures.

IV. Instructions to the Trainee

1. Remember TTO Procedures. There is a 50-minute time limit.
2. This job sheet will aid you in becoming proficient in performing adjustments on the Power Supply PP-7474/BSC-1 to support documented corrective maintenance.
3. You will be evaluated on your observance of safety precautions during performance of this job sheet. In addition, strict adherence to documented procedures will be closely monitored.

Performance Record Sheet

PILOT COURSE MONITORING REPORT

PILOT COURSE MONITORING REPORT

LOCATION: TRITRAFAC BANGOR

TITLE: Trident
Exterior
Communications System

PERIOD OF REPORT: 17 Mar – 22 May 91

CIN: A-111-4251

MONITORS/REPRESENTING: ETCS Trueman (Pilot Team
Chairman) TRITRAFAC, BANGOR
ETC Upton (Course Monitor)
TRITRAFAC, BANGOR

I. ADMINISTRATION

A. Facilities

1. The present facility at TRITRAFAC, BANGOR is large enough to accommodate 24 trainees. However, since the equipment utilized for the follow-on course can only accommodate 12 trainees, it is recommended that the Exterior Communications System class size be held to a maximum of 12 trainees.

B. Safety

1. TTO and specific safety hazards were called out before each laboratory.

C. Security

1. Not applicable as this course is unclassified.

D. Allocation

1. This course can be taught in 9 weeks, as planned, with a total of 360 contact hours.

E. Critique Sheets (Summary of trainee comments)

1. Overall, trainee comments were favorable regarding the course content and the instructors.

2. Trainees felt the skills and knowledge acquired from the course would be directly applied on the job.
3. A number of trainees felt the course should have been a week longer in order to slow the pace down and provide more time for studying before the tests.

II. CURRICULUM VALIDATION

A. Lesson Plan

1. This command scheduled a pilot and taught this course from 28 January to 10 April 1991. However, shortly into the pilot, the course monitors and LT Duncan, Deputy for Shore/Technical Training (CNET T2), all agreed that the lesson materials should be revised and a second course pilot conducted.
2. The following changes were made to the lesson materials prior to the repilot:
 - a. The revised Training Level Assignment (TLA) dated 4 December 1991 was utilized vice the TLA dated 8 November 1990.
 - b. More information supporting each of the main headings was included in the Lesson Plan. The informational bullets were included to assist the instructors in personalizing their Lesson Plan and in teaching the course.
 - c. Topics were resequenced for better teachability and flow.
 - d. The Resource Requirements list was revised to accurately reflect required training materials.
 - e. PPP line items from Logistics Leadership and Management Table B061 were not included in the Lesson Plan. These items will be taught in General Military Training (GMT).

B. Trainee Guide

1. The Trainee Guide was revised to correspond with the Lesson Plan and study questions on the reading assignments were included. The instructors reviewed the assigned study questions at the start of each day.
2. Due to the short turnaround time, the Trainee Guide used in the pilot was a cut-and-paste revision of the previous Trainee Guide.
3. It was decided that the trainees should write in the Trainee Guide and take it with them to their next command. While this will result in higher printing costs, it was determined that the revised Trainee Guide contains a considerable amount of valuable information that the trainees could use at their next command.

C. Equipment/Tools

1. All equipment and tools were adequate except the AN/ASM-4D Multimeter input impedances too low and gives inaccurate readings. Digital Voltmeter replacement will be required.

D. Instructional Media Materials

1. All transparencies will be screened for readability at 20 feet from the screen.

E. Instruction

1. The instructors were prepared to teach all of the lessons and the lessons were well presented, which kept the interest level high throughout the course.

F. Testing

1. Only one version of the test series was completed in time for the pilot. The course testing officer has been tasked to develop alternate test series for the course.

III. INSTRUCTIONAL ACCURACY/ADEQUACY

A. Not applicable

IV. MINORITY REPORTS

A. None

V. OTHER

A. As the Monitoring Team Chairman, I recommend that this course be revised as is indicated by the red-lined Lesson Plan. I recommend that all subsequently scheduled classes be taught using the red-lined Lesson Plan until smooth copies are promulgated.

HAZARD AWARENESS NOTICE

All personnel involved in operation or maintenance of electronic equipment must be thoroughly familiar with the electronic equipment safety precautions contained in Electronic Installation and Maintenance Book, General, NAVSEA SE000-00-EIM-100, section 3, and Naval Ships' Technical Manual, chapter 300, S9086-KC-STM-010/CH-300, section 2. In addition, attention is directed to the Navy Safety Program Instructions, OPNAVINST 5100.19 (series) and 5100.23 (series), and the safety training requirements contained in CNETINST 1500.20 (series).

This equipment employs voltages which are dangerous and may be fatal if contacted by operating or maintenance personnel. There are mechanical safety devices associated with this equipment that must be maintained in a constant state of readiness to preclude causing injury to personnel and/or damage to equipment. Extreme caution must be exercised when working with or handling this equipment. Some components are extremely heavy. Rigid pre-inspections must be made to handling equipment to ensure their safety and safety summaries must be read to the handling teams prior to conducting dangerous evolutions. Hazard awareness dictates that this equipment must always be viewed as an integral part of a system and not as a component. While every practical precaution has been incorporated into this equipment, it is not possible or practical to try to list every condition or hazard that you may encounter. Therefore, all operating or maintenance personnel must at all times observe as a minimum, the following:

DON'T SERVICE OR ADJUST ALONE

Under no circumstances will a person operate or maintain equipment without the immediate presence or assistance of another person capable of rendering aid. Unless under direct supervision of a qualified person, no person shall operate or maintain equipment for which they are unqualified.

DON'T TAMPER WITH INTERLOCKS

Reliance on interlock circuits to remove power from the equipment is never to be assumed. Until operation of the interlock is verified, equipment is assumed to be in the hazardous mode of operation. Under no circumstances will any access gate, door, or interlock switch be removed, bypassed, or modified in any way by other than authorized maintenance personnel and then only after observing proper tag-out procedures.

HAZARD AWARENESS NOTICE (Continued)

REPORT ALL HAZARDS

If at any time you detect a hazard, it is your responsibility to report the hazard to ensure that it is corrected. If the hazard is detected during a teaching session, verbally call a "TRAINING TIME OUT" (TTO), raise a clenched fist if the verbal TTO signal cannot be heard. Stop any exercise if a trainee indicates a TTO. If at any time you detect a "new" or "suspected new" hazard, particularly due to equipment installation, modification, or repair, it is your responsibility to ensure that a SAFETYGRAM is submitted to the Naval Safety Center, Norfolk, VA in accordance with OPNAVINST 5102.1 (series). This will ensure that this hazard will be investigated, publicized, or corrected, as required. Additionally, SSPINST 3100.1 (series) requires SWS personnel to submit special check TFRs when a potential or actual unsafe condition is noticed that could cause injury to personnel and/or damage to equipment. When a problem/failure occurs involving the safety of personnel or equipment and it cannot be immediately resolved by command/technical assistance on-site, the TFR data shall be transmitted to SSP and others by Naval Message.

INFORM TRAINEES OF THEIR RESPONSIBILITY FOR SAFETY

Inform trainees to verbally call a TTO if they detect a hazardous condition during any teaching session (lab or theory), or to raise a clenched fist to indicate a TTO if the verbal command cannot be heard.

EXERCISE CONTROLLER GUIDE

ECG-N5

HOW TO USE THE EXERCISES

INTRODUCTION TO THE EXERCISE CONTROLLER GUIDE

This Exercise Controller Guide (ECG) is a compilation of independent exercises to be used with the Computer Base Trainer. Each exercise provides scenarios and selected procedures to accomplish specific, predetermined training objectives.

The exercises are designed to provide an effective means to develop and reinforce those skills required as a basic navigation watchstander. Each exercise supports a controller-to-trainee relationship (to be used by a controller to conduct either individual or team training and assessment). The core of the ECG is a series of training exercises which can be used to sequentially represent a normal refit period and/or patrol period.

The exercises contained in this ECG are used in conjunction with formal and informal courses of instruction: TRIDENT Common Navigation Technician Conversion (A-193-0375), TRIDENT Navigation Operator (A-193-0378), TRIDENT Navigation Maintenance (A-193-0379), ESGN Theory and Maintenance I (A-193-0389), ESGN Theory and Maintenance II (A-193-0390), and responsive training. Many exercises may be applicable for use in other curricula and will be identified at a later date.

EXERCISE SELECTION

The key to using the ECG is the process of selecting the exercises for use in training. Two methods are available for use by the school's instructional staff: the prescribed order identified by formal courseware or by use of the Exercise Selection Index (ESI).

The exercise selection by A-193-0375, A-193-0378, A-193-0379, A-193-0389, and A-193-0390 has been designed to represent those tasks which would normally be executed/encountered during refit and patrol periods. The order of selection established will expose the trainee to those tasks, in the proper sequence, necessary to perform a refit and patrol.

Exercise selection utilizing the index is an alternate method of selecting one or more exercises for a training program. Depending on the program and its purpose, exercises on a particular type of operational task or training level may be included which are suited to the individuals being trained. This method is useful when needed training emphasis is known.

COURSE LEARNING OBJECTIVES

Upon successful completion of this course, the trainees will acquire the following knowledge and skills and be able to:

Knowledge:

1. State the purpose, function, and location and describe the documentation of the:
 - a. Torpedo Launching System.
 - b. MK 48 Torpedo Ancillary Equipment
 - c. Ordnance Handling Equipment

2. Describe the theory necessary to support and understand the performance of all operational tasks, and basic corrective maintenance without going into detailed logic, circuit analysis, individual program flow diagrams, or detailed mechanical component breakdown of the:
 - a. Torpedo Launching System
 - b. MK 48 Torpedo and Ancillary Equipment
 - c. Ordnance Handling Equipment

Skills:

1. **Perform all operational procedures with supervision on the:**
 - a. **Torpedo Launching System**
 - b. **MK 48 Torpedo and Related Equipment**
 - (1) **OTTO fuel spill procedures**
 - (2) **Hot Run**
 - c. **Ordnance Handling Equipment**

2. Perform documented fault isolation and repair procedures with supervision on the:
 - a. MK 48 Torpedo and Related Equipment
 - b. Torpedo Launching System
 - c. Ordnance Handling Equipment

PART 2C01

TORPEDO LAUNCHING SYSTEM

This part contains information from PPP tables 2C01, 2C06, and M203.

SECTION 1. THEORY AND OPERATION OF THE TORPEDO LAUNCHING SYSTEM. (TLS)

<u>TOPIC NO.</u>	<u>TOPIC TITLE</u>	<u>PAGE</u>
1.	DOCUMENTATION DESCRIPTION OF THE DWOS	2C01-1-1-1
2.	GENERAL, PHYSICAL, FUNCTIONAL INTERFACE, AND OPERATION DESCRIPTION, AND OPERATIONS OF THE TORPEDO LAUNCHING SYSTEM	2C01-1-2-1

2C01-1-1

TOPIC 2. GENERAL, PHYSICAL, FUNCTIONAL INTERFACE, AND OPERATIONAL DESCRIPTION AND
OPERATIONS OF THE TORPEDO LAUNCHING SYSTEM

Topic Learning Objectives

Upon successful completion of this topic, the trainee will be able to:

1. State the purpose of the Torpedo Launching System to support normal operation.
2. State the components of the Torpedo Launching System to support normal operation, including the function of each.
 - a. MK 68 Torpedo Tube
 - b. Defensive Weapons Launch Console (DWLC)
 - c. MK 17 Torpedo Ejection Pump (TEP)
 - d. Guidance Wire Streamed Detector System
3. State the security requirements for the Torpedo Launching System to support normal operation.
4. Define the abbreviations, terms, and symbols used with the Torpedo Launching System to support all operations.
5. State the operational characteristics, capabilities, and limitations of the Torpedo Launching System to support all:
 - a. Modes of operation
 - b. Types of weapons/devices
6. Describe all major and associated components of the Torpedo Launch System to support all operations.
 - a. Barrel
 - b. Breech door and breech door mechanism
 - c. Muzzle door and muzzle door mechanism
 - d. Slide valve
 - e. Stop mechanism
 - f. Interlock mechanism
 - g. Turbine ejection system
 - h. Control valves
 - i. Shutter door assembly
 - j. Port/stbd miscellaneous valve position panels
 - k. Indicator panel
 - l. Ejection pump fuse panel
 - m. Port/stbd torpedo tube fuse panels
 - n. Weapon Launch Console MK 96 Mod 0
 - o. Port/stbd torpedo tube control panels
 - p. Power supply sections
 - r. Guidance wire streamed detector

1-2 THEORY OF THE TORPEDO LAUNCHING SYSTEM

TOPIC 2. GENERAL, PHYSICAL, FUNCTIONAL INTERFACE, AND OPERATIONAL DESCRIPTION AND OPERATIONS OF THE TORPEDO LAUNCHING SYSTEM (Continued)

7. Describe the functional operation of the Torpedo Launching System to support all operations, including control, sequential operation, and indications.
 - a. Prelaunch
 - b. Launch
 - c. Postlaunch
8. Describe the function of each control, indicator, and actuator of the Torpedo Launching System in each position, condition, and color to support all operations. Include name, reference designator and indications.
9. Describe the physical and functional interface between the Torpedo Launching System and other equipment/subsystem and systems to support all operations to include:
 - a. Power Sources
 - b. Pneumatics
 - c. Hydraulics
 - d. Water
 - e. Valves
 - f. Manifolds
10. Describe authority, and regulations, and personnel and equipment safety precautions which are to be observed during all operations of the Torpedo Launching System. Include Electrostatic Discharge.
11. Describe normal operational tasks of the Torpedo Launching System as contained in applicable documentation.
 - a. Prelaunch procedures
 - b. Launch procedures
 - c. Postlaunch procedures
12. Describe indications which should or may occur during all operations of the Torpedo Launching System as contained in applicable documentation, including alarms and indicators.
13. Describe tasks for casualty operation of the Torpedo Launching System as contained in applicable documentation.
14. **Perform tasks for operation of the Torpedo Launching System to include prelaunch, launch, and postlaunch procedures to support normal operations.**
15. **Recognize and interpret all indications occurring during the performance of the operating procedures and perform appropriate operator actions to support all operations.**

1-2 THEORY OF THE TORPEDO LAUNCHING SYSTEM

TOPIC 2. GENERAL, PHYSICAL, FUNCTIONAL INTERFACE, AND OPERATIONAL DESCRIPTION AND OPERATIONS OF THE TORPEDO LAUNCHING SYSTEM (Continued)

16. Perform tasks for casualty operation of the Torpedo Launching System.

17. Describe Training Safety to include Training Time Out (TTO).

HAZARD AWARENESS NOTICE

All personnel involved in operation or maintenance of electronic equipment must be thoroughly familiar with the electronic equipment safety precautions contained in Electronic Installation and Maintenance Book NAVSEA 0967-LP-000-0100, section 3, and NSTM, Electronics, chapter 400, NAVSEA S9086-ND-STM-000/CH 400, section 2. In addition, attention is directed to the Accident Prevention Manual, OPNAVINST 5101.2 series, and Safety procedures for Conducting training in arduous or potentially high risk activities, CNETINST 1500.20.

This equipment employs voltages which are dangerous and may be fatal if contacted by operating or maintenance personnel. Extreme caution must be exercised when working with this equipment. Hazard awareness dictates that this equipment must always be viewed as integral part of a system and not as a component. While every practical precaution has been incorporated into this equipment, it is not possible or practical to try to list every condition or hazard that you may encounter. Therefore, all operating or maintenance personnel must at all times observe as a minimum, the following:

DON'T SERVICE OR ADJUST ALONE

Under no circumstances will a person operate or maintain equipment without the immediate presence or assistance of another person capable of rendering aid. Unless under direct supervision of a qualified person, no person shall operate or maintain equipment for which he is not qualified.

DON'T TAMPER WITH INTERLOCKS

Reliance on interlock circuits to remove power from the equipment is never to be assumed. Until operation of the interlock is verified, equipment is assumed to be in the hazardous mode of operation. Under no circumstances will any access gate, door, or interlock switch be removed, bypassed or modified in any way by other than authorized maintenance personnel and then only after observing proper tag-out procedures.

EXERCISE CONTROL GUIDE

CHANGE 3
A-123-0001 ECG-W1

HAZARD AWARENESS NOTICE (Continued)

REPORT ALL HAZARDS

If at any time you detect a hazard, it is your responsibility to report the hazard to ensure that it is corrected. If at any time you detect a "new" or "suspected new" hazard, particularly due to equipment installation modification or repair, it is your responsibility to ensure that a SAFETYGRAM is submitted to the Naval Safety Center, Norfolk, VA, in accordance with OPNAVINST 5102.1 series. This will ensure that this hazard will be investigated, publicized, or corrected, as required.

SAFETY SUMMARY

The following paragraphs summarize, for the benefit of the Weapons Department and qualified launcher personnel, the safety rules and general safety precautions for the operation of pyrotechnics, countermeasures, evasion devices, and their launcher systems. Familiarity with and adherence to the applicable safety rules and safety precautions are mandatory for all personnel involved in the operation and maintenance of the system. Specific safety precautions are contained in the checklists and operating procedures, as appropriate.

1. SAFETY STANDARDS

The following safety standards apply to all phases of operations involving the devices and their launcher systems. The controls and rules are designed to provide positive measures to:

- a. Ensure that a launched device is precluded from striking the firing ship.
- b. Prevent an inadvertent/accidental launching.
- c. Ensure that the disposition, handling, launching, and aborting operations of the device launcher system will be such as to minimize the risk of injury to personnel and or equipment.

2. MK 48 SAFETY PRECAUTIONS

- a. Explosive Precautions

HAZARD AWARENESS NOTICE (Continued)

- (1) These units contain high explosives. Do not strike or drop high explosive components. No sparks, open flames, or other sources of ignition are to be present when working with high explosives.
 - (2) The arming device contains an explosive charge and must be handled with care. The explosive charge is relatively insensitive, but the arming device should not be subjected to physical shocks or unnecessary handling.
 - (3) The warhead contains high explosives. Observe all precautions for handling explosives. An armed exploder must NOT be removed from the torpedo. If the exploder is armed, it must be removed by EOD personnel only. (Refer to NWP-72-1.)
 - (4) If the exploder tube feeler index is not in the SAFE position and flush with the exploder head, rotate the Manual Safing Switch to the RECOVER position and notify EOD personnel.
 - (5) A safety screw can be installed in the exploder only if the tube feeler is in the SAFE position. If the safety screw is not available or cannot be installed, reject the exploder.
- b. OTTO FUEL PRECAUTIONS
- (1) For any OTTO fuel detector reading in excess of 0.2 ppm, OTTO fuel spill procedures must be implemented.
 - (2) Food, drink, and tobacco are not permitted in OTTO fuel spill areas.
 - (3) Organic cartridge respirators or oxygen breathing apparatus are not to be used in combatting OTTO fuel-associated casualties, including cleanup of spills or combustion by-products.
 - (4) A minimum of two people will be present during operations involving OTTO fuel.

HAZARD AWARENESS NOTICE (Continued)

- (5) OTTO fuel, a monopropellant, has a flash point of 265° F and does not require oxygen to sustain ignition.
- (6) (MK 48) Exhaust gases from a HOT RUN MK 48 are extremely toxic and constitute personnel hazards by inhalation, ingestion, and skin absorption.

c. ADDITIONAL MK 48 SAFETY PRECAUTIONS

- (1) Mechanical Precautions. To preclude the possibility of the torpedo engine lubricating oil draining out of the sump, the MK 48 torpedo shall not be rotated in excess of 90 degrees, except for defueling.
- (2) Operating Precautions. Under no circumstances will fire control transmission checks be conducted on a MK 48 torpedo outside the torpedo tube.

3. HANDLING PRECAUTIONS

- a. Handling equipment shall never be loaded to its maximum rated capacity and must be inspected prior to use.
- b. Hooks used in handling procedures must have safety latches or be moused.
- c. Do not allow weapon to be unrestrained, in any direction, at any time.
- d. At no time will a device be unloaded through the breech without specific permission of the commanding officer.

EXERCISE CONTROL GUIDE

CHANGE 5
A-123-0001 ECG-W1

HAZARD AWARENESS NOTICE (Continued)

4. ELECTRICAL PRECAUTIONS

- a. Personnel must be grounded immediately prior to touching an electrical connector or wire connected to the weapon. Personnel must momentarily ground themselves by making bare skin-to-metal contact with the weapon.
- b. Personnel working with or near high voltages should be familiar with the methods of artificial respiration.
- c. Inspect all electrical connectors for bent pins and other physical damages. Always engage and disengage electrical connectors by holding the connector, never the wire.
- d. Operating personnel must at all times observe all safety regulations. Do not replace components or make adjustments inside the equipment with the high-voltage supply turned on. Under certain conditions, dangerous potentials may exist when the power control is in the OFF position, due to charges retained by capacitors. To avoid casualties, always remove power and discharge and ground a circuit before touching it.
- e. Under no circumstances should any person reach into or enter the enclosure for the purpose of servicing or adjusting the equipment, except in the presence of someone who is capable of rendering aid.

5. HIGH PRESSURE AIR PRECAUTIONS

- (1) Pressurized air leaks produce a jet of high velocity air which normally cannot be seen. Care must be taken to avoid the path of one of these jets. Exposing any part of the body to high velocity air can cause serious bodily injury.
- (2) Do not stand in the way of relief valve or bleed discharge ports. Exposing any part of the body to high velocity air can cause serious bodily injury.

HAZARD AWARENESS NOTICE (Continued)

- (3) Open all HP air valves slowly whenever the differential pressure across the valve exceeds 200 psig. Avoid a pressurization rate in excess of 200 psig per minute to prevent the possibility of compression ignition or a shock wave that could rupture a pipe or fitting.

6. TOXIC MATERIAL PRECAUTIONS

- a. Vapors of most cleaning agents are toxic if inhaled in large quantities for extended periods. Use toxic cleaning agents sparingly and in well-ventilated areas. Be sure that cleaning agent containers are kept closed, except when actually in use. Wash hands thoroughly with soap and warm water after using cleaning agents.
- b. Use flammable cleaning agents and paints sparingly and only in well-ventilated areas. Be sure no sparks, open flames, or other source of ignition are present when materials which are flammable are being used.

7. GENERAL GUIDANCE

Use of personnel listed in personnel tables is not required, unless so indicated. The combined tasks of Supervisor, Reader, Tool Handler, and Workers may be performed by a minimum of two personnel, providing procedures are performed properly and the Reader/Worker Routine will be enforced when applicable. Upon completion of an evolution, complete work-log/form entries as required by the Type Commander.

8. WARNINGS

The following WARNINGS are repeated from the technical documentation for protection of personnel.

WARNING

ALL HOOKS WITHOUT SAFETY LATCHES MUST BE MOUSED.

HAZARD AWARENESS NOTICE (Continued)

WARNING

WEAPON MUST BE RESTRAINED AT ALL TIMES.

WARNING

VERIFY OTTO FUEL DETECTOR IS RUNNING FOR THIS OP. (OP1.20)

WARNING

THE MK 15 OTTO FUEL DETECTOR SHALL OPERATE CONTINUOUSLY DURING ALL MK 48 TORPEDO HANDLING EVOLUTIONS.

WARNING

IF THE PRESENCE OF OTTO FUEL IS DETECTED, DISCONTINUE EVOLUTION.

WARNING

WHEN OPERATING RAMMER, VERIFY ALL PERSONNEL ARE CLEAR OF AREA AND ARE AWARE RAMMER IS IN MOTION.

INTRODUCTION

1. INTRODUCTION TO TRAINING SYSTEM

1-1 THE FUNCTIONAL OBJECTIVE OF THE TORPEDOMAN

Team Trainer is to provide refresher training in Normal, and Casualty Operations, During Battlestations Torpedo and Battlestations Missile.

The purpose of this training is to refine and integrate individual Team Member performance into a concerted performance. This is accomplished by emphasizing previously acquired individual Skills/ Knowledge, interteam communication. Recognition of Emergency situations that threaten the ships ability to defend itself.

1-2 TRAINING SYSTEM DISCUSSION

The Training System for the Torpedoman Team Trainer consists of (1) Torpedo Tube Lab, (2) MK 48s, MK 70 Moss System, IG, PG, and ECG. The following paragraphs describe capabilities and limitations of the Torpedo Tube Lab. Summarizes ECG composition, organization, use, maintenance, and describes associated training matter duties.

1-2.1 TORPEDO TUBE LAB

The purpose of the Torpedo Tube trainer is to provide a simulated Torpedo environment in which Battlestations can be conducted.

Intended use is to refresh Reload Party and Torpedoman on procedures and working as a team. Recognition of Casualties, Communications, and decision making.

1-2.2 DISCUSSION

To achieve optimum training and evaluation of the Torpedomen and Reload Party. The training simulates actual operation and equipment necessary in developing, and refining Reload in torpedo tube casualty skills.

The Trainer consists of the following Major Areas:

- a. Torpedo Tube
- b. Handling Platform
- c. Classroom

INTRODUCTION (CON'T)

1-2.2 (con't)

The Instructor Panel in the training area enables the Instructor to control problem fault modules and monitor operations.

2. EXERCISE SECTION

2-1 BACKGROUND

This section presents a procedure for selection of Training Exercise contained in this volume. the Exercise Selection Index provides a matrix of training considerations within a specific Exercise.

2.2 DISCUSSION

The details regarding the specific procedures for Exercise Selection are as follows:

2-2.1 EXERCISE SELECTION BY INDEX

Exercise Selection utilizing the Index is the method for selecting the exercise for a training session. With the Index criteria presented, specific Indexing criteria follow with a brief explanation of each Indexing criterion:

- a. The exercise Objective specifies the detailed purpose of the particular Exercise with regards to the Torpedo Team Trainer proficiency.
- b. The Exercise Scenario column provides synopsis of conditions under which the Exercise is to be performed.
- c. The System/Subsystem configuration column specifies the equipment line-up readiness condition or mode of operation required to conduct the exercise.
- d. Exercise Length is a guideline only, safety procedures are of utmost concern and Exercise Length is variable.
- e. The Training Level (TOS) column specifies the TOS for each Exercise.
- f. The Difficulty Index indicates the degree of exercise difficulty relative to the appropriate TOS. It is helpful in selecting exercises appropriate to the proficiency of the Torpedo Room Team Members.

2.

INTRODUCTION (CON'T)**3. LOCALLY PREPARED EXERCISE****3-1 BACKGROUND**

This section presents procedures for local development of the training exercises. This volume provides a cross section of training exercises ready for immediate use within the Training Plan. Optimal use of training system may result in the need for additional materials beyond the limit number of training exercises provided. A portion of this need can be resolved through local training exercise development. This will accomplish two functions: tailor exercises to specific training requirements, and increase the initial exercise library.

3-2 DISCUSSION

Locally prepared exercise should make a significant contribution to the effectiveness of the Torpedo Team training and extend the versatility of the training system. Exercise must be carefully developed by using an organized approach based on a structure to achieve training. The exercise presented involves extensive developmental and background efforts.

The component parts with exercises are:

- a. Exercise objectives.
- b. Set-up Requirements.
- c. Exercise Scenario and Tactical Background.
- d. Exercise Events.

An overall consideration which determines these components are used with an exercise, and where training should be emphasized, is the training approach. This relationship between the training approach and the component parts of an exercise will be defined in the paragraph following. For uniformity, it is highly recommended that the format of exercises in this ECG be used for locally prepared exercises.

3-3 EXERCISE DEVELOPMENT

The following guidelines for specific exercises development explain the training approach concept and its role in developing the components within the exercise.

INTRODUCTION (CON'T)

3-3 (con't)

For each exercise, a training approach must be defined which tells the Instructor exactly how he will administer the exercise. The exercise objective must be determined coincident with the selection of a training approach. The exercise objective defines the well as the object of the training. Exactly what training as to be accomplished must be defined. It is not advisable to include other training aspects within the same training, but to concentrate the objective to the need.

3-3.1 EXERCISE SET-UP

Once the training approach and the exercise objective have been defined, the actual exercise set-up must be developed. this includes such consideration as:

- a. Exercise length - Expected time to accomplish the objective
- b. Own ship limitations
- c. Student expertise

3-3.2 EXERCISE SCENARIO

The tactical situation and environment provides the setting in which the training will occur, and must complement the exercise objective. In establishing the exercise environment, it must be kept in mind how the actual external environment (depth, Speed, Trim) is expected to affect the training, and what limits should be established for this.

Exercise Scenario should include:

- a. Assumed OpArea or location.
- b. Assumed ship operation or evolution

3-3.3 EXERCISE EVENTS

The exercise events are the logical step-by-step method by which the exercise presents the training problem to the operators. They include:

- a. Precomex events which are normally for briefing the operators on the assumed tactical situation versus the training problem, setting up equipment and trainer inputs, and performing items such as placing damage control gear in the trainer.

INTRODUCTION (CON'T)

3-3.3 (con't)

- b. Comex is a point in the exercise at which the trainer function is started and target injection occurs.
- c. Training Events are the principal events required to accomplish the intended training. The specific number of events is based on the requirements of the objectives.
- d. Finex is when the trainer is secured, and no further exercises occur.
- e. Review occurs upon completion of the training section. The specifics of this review are a function of the Training approach for the particular exercise.

Generally, the instructor may review what training was considered important, how it was or was not achieved, and the approach to correct less-than-effective areas of operation. A question and answer period may also occur at this time.

3-3.4 EXERCISE SUBMITTAL

When developing exercises specific to individual training devices, include trainer type in requirements section of the Exercise Title Sheet. submit proposed Exercise to Course Curriculum model Manager for approval and issue of Interim Change to incorporate. All Interim Changes will be included in the next Change or Revision.

4. OPERATIONAL TRAINER SAFETY INSTRUCTIONS

4-1 SAFETY DISCUSSION

Safety is the utmost importance in the operation of the training device. Trainees are encouraged to work quickly, but carefully in the trainer to avoid injuries, all trainees will be briefed on trainer safety precautions prior to the training session.

4-1.1 TRAINER SAFETY GUIDELINES

Trainer safety is of the utmost importance, and as such, the following requirements will be adhearded to.

INTRODUCTION (CON'T)

4-1.1 (con't)

- a. All personnel involved in the operation of the trainer will complete the following.
 - (1) Know the location of the first aid equipment.
 - (2) Complete the basic first aid course.
 - (3) Be qualified to perform cardiopulmonary recitation.
- b. All operators will complete a qualification program for the trainer operation.
- c. A minimum of one operator will be present for all training sessions.
- d. All students attending the 5 day trainer session will complete the course in its entirety.
- e. Prior to students training, an orientation brief and walk-through of the trainer will be conducted by the instructor and cover at a minimum, the following:
 - (1) Drop On Request (DOR)
 - (2) Training Time Out (TTO)
 - (3) Location of all first aid equipment.
 - (4) Casualty plan for injured.
 - (5) Location of communication equipment.
 - (6) Location and responsibility of supervisor, operators safety observers.
 - (7) All safety precautions associated with the handling of hazardous materials.
- f. All students will wear steel-toe shoes during the trainer section.
- g. Operators review system line-up checks for all normal and emergency systems necessary to support safe training.
- h. Operators review prior to each training section, all actions required in the event of personnel casualty, to include first aid, notification of appropriate supervisors, and personal evacuation methods and routes.

INTRODUCTION (CON'T)

- i. At the minimum, whenever any of the following conditions exist, the operator and/or safety observer will terminate the training section until the unsafe conditions are corrected.
